Section 1: Getting Started

Topics Covered

- Turning Your Phone On and Off
 - Setting Up Voicemail
 - Understanding this User Manual
-

This section allows you to start using your phone by activating your service, setting up your voicemail, contacting customer support, or getting an understanding of how this manual is put together.

Section 1

Turning Your Phone On and Off

Turning Your Phone On

1. Open the flip, then press .

Note: As with any other radio-transmitting device, do not touch the internal antenna as it affects call quality and may cause the phone to operate at a higher power level than is necessary. The internal antenna is located along the top on the back side of your phone.

2. Your service provider's name momentarily appears in the display and the phone begins searching for a network signal.
3. Once the phone finds a signal, the time, date, and day appear in the display.
4. You're now ready to place and receive calls.

If your phone is outside the Verizon Wireless coverage area the roaming icon  appears in the top of the display.

Turn Your Phone Off

Press and hold  for two or more seconds. Your phone powers off.

Setting Up Voicemail

Voicemail allows callers to leave voice messages, which can be retrieved any time.

Note: Once you have set up your Voicemail account, you can use the Messaging option **Voicemail** (option 5) to view details of voice messages in your voice mailbox (see "Voicemail" on page 105 for more information).

Voicemail Setup

1. In standby mode, press and hold the **F2** key or press ***+1**, **0**, **0**, **SEND**.
2. Follow the prompts in the new user tutorial to setup your mailbox.

Listen to Voicemail

1. In standby mode, press and hold the **F2** key or press ***+1**, **0**, **0**, **SEND**.
2. You are then prompted to enter your password followed by **#** key.
3. Follow the recorded prompts to listen to messages, change administrative options, and so on.

Understanding this User Manual

The chapters of this manual generally follow the same order as the menus and sub-menus in your phone. A robust index for quick reference to most features begins on page 229.

Also included is important safety information that you should know before using your phone. Most of this information is near the back of the guide, beginning on page 191.

Notes and Tips

Throughout this guide are icons and text that are set apart from the rest. These are intended to point out important information, quick methods for activating features, to define terms, and more. The definitions for these methods are as follows:

- **Notes:** Explain alternative options within the current feature, menu, or sub-menu.
- **Tips:** Provide quick or innovative methods for performing functions related to the subject at hand.
- **Important:** Points out important information about the current feature that could affect performance, or even damage your phone.

Battery

Note: This phone comes packaged with a partially charged rechargeable standard Li-Ion battery and travel charger.

Important: Although the phone can be used while the battery is charging, the battery must be fully charged before first use, otherwise you risk damaging the battery.

Using A Non-Supported Battery

Samsung handsets do not support the use of a non-supported battery.

When using a non-supported battery you will hear a series of beeps and you will see a warning message that indicates "NON SUPPORTED BATTERY SEE USER GUIDE." If you receive this warning, battery charging has been disabled.

Samsung charging accessories (i.e. travel adapter, and cigarette lighter adapter) will only charge a Samsung approved battery.

To continue use of your Samsung handset press .

Note: When using a non-supported battery the handset can only be used for the duration of the battery life and cannot be recharged.

Important: Using a non-supported battery may cause damage to your phone. Use a Samsung supported battery only.

Install the Battery

1. Slide the battery cover down and lift up to remove it.
2. Insert the top end of the battery in the direction of the arrow printed on the battery into the phone housing. The gold contacts on the top of the battery should match up with those on the phone.
3. Push the top end of the battery down until it snaps into place.
4. Slide the battery cover up until it snap into place.

Remove the Battery

1. Slide the battery cover down and lift up to remove it.
2. Use your finger to lift the battery (bottom end first) up and away from the phone.

Charge the Battery

Your phone is powered by a rechargeable standard Li-ion battery. Only use Samsung-approved charging devices and batteries. Samsung accessories are designed to maximize battery life. Using other accessories may invalidate your warranty and may cause damage.

Note: For connection to an electrical supply not located in the U.S., you **must** use an adaptor of the proper configuration for the power outlet. Use of the wrong adaptor could damage your phone and void your warranty.

Travel Charger

The travel charger is a convenient, light-weight charger that rapidly charges your phone from any 120/ 220 VAC outlet.

1. Plug the large end of the travel charger into a standard 120/220 VAC wall outlet.
2. Insert the smaller end of the travel charger into the charger/ accessory connector at the bottom end of the phone.

Section 2

Tip: You can use your phone while charging, however, the battery charges faster if the phone is turned off.

Battery Indicator

The battery indicator  in the upper-right corner of the display indicates battery power level. Four bars indicate a full charge, while an empty icon  indicates an almost empty battery. Two to three minutes before the battery becomes too low to operate, a blinking empty battery icon  appears and a tone sounds. If you continue to operate the phone without charging, it shuts down.

Removable Memory Card Storage

Note: Your phone does not come with the microSD™ memory card, it must be purchased as an accessory. See your service provider for more information.

The following file types can be saved to the removable microSD™ memory card:

- **My PIX:** Pictures you have saved from a PIX message or taken using your phone.
- **My FLIX:** Video Clips you have saved from a FLIX message or taken using your phone.
- **My Music:** Music you have downloaded directly from the V CAST Music catalog or music you have transferred from your PC using Sync Music.
- **My Sounds:** Sounds you have recorded using your phone or saved from a PIX message with Sound attached.

Phone Memory Storage

The following file types can be saved to the phone memory storage area:

- **My PIX:** Pictures you have saved from a PIX message, downloaded via the “Get It Now” application, or taken using your phone.
- **My FLIX:** Video Clips you have saved from a FLIX message, downloaded via the “Get It Now” application, or taken using your phone.

Roaming

What is Roaming?

Your phone can roam on other digital networks. Roaming occurs when you travel outside a pre-designated coverage area. The roaming icon displays when roaming is active and extra charges may apply when making or receiving calls.

Note: Some features may be unavailable while roaming.

Roaming Options

The following roaming options are available:

- **Home Only** - Your phone is available for normal operation only in the designated coverage area.
- **Automatic-A:** The preferred roaming list is used to acquire service. If no preferred systems are found, any digital "A" system is acquired.
- **Automatic-B:** The preferred roaming list is used to acquire service. If no preferred systems are found, any digital "B" system is acquired.

Note: Contact your service provider for information regarding preferred systems.

To change your Roaming option, follow these steps:

1. Press  **MENU**. Use the right navigation key to highlight  **SETTINGS & TOOLS**.
2. Press  **Phone Settings**.
3. Press  **System Select**.

4. Use the up or down navigation keys to choose the setting you want, and press .

TTY

Your phone is fully TTY compatible. Connect the TTY equipment to the headset jack, which is located on the right side of the phone. Before you can use your phone with a TTY device, you'll need to enable TTY functions in the phone.

Note: Enabling TTY disables headset audio.

1. Press  **MENU**. Use the right navigation key to highlight  **SETTINGS & TOOLS**.
2. Press  **Call Settings**.
3. Press  **TTY Mode**. The TTY Mode screen displays.
4. A warning appears in the display stating **"ENABLING TTY WILL DISABLE HEADSET AUDIO. CONTINUE?"**
 - Use the up or down navigation key to highlight **Yes** and press  to proceed to **TTY MODE** screen.
 - Use the up or down navigation key to highlight **No** and press  to return to **Call Settings** menu.
5. Use the up or down navigation keys to select one of the following:
 - **TTY Full**
 - **TTY + Talk (VCO)**
 - **TTY + Hear (HCO)**
 - **TTY Off**
6. Press  to make your selection. The **TTY Mode Set** screen displays.

VoiceSignal™

VoiceSignal is advanced speech recognition software that can be used to activate a wide-variety of functions on your phone. VoiceSignal software automatically voice activates all contacts for voice dialing, message addressing and searching, no pre-recording or training needed. When using VoiceSignal, speak naturally but clearly. Names should be spoken exactly as they are spelled in the contact list.

VoiceSignal Settings

You can adjust the settings and preferences for VoiceSignal by opening Voice Commands menu in the Tools menu. Using this menu, you can change the following Voice Command features:

- Digit Dial Adaptation
- Reset Digit Dial Adaptation
- Choice list behavior
- Voice recognition sensitivity
- VoiceSignal sound and TTS settings
- VoiceMode Adaptation and Tutorial

To access the VoiceSignal Settings menu, follow these steps:

1. At the standby screen, press **OK** **MENU**. Use the right navigation key to highlight **SETTINGS & TOOLS**.
2. Press **2nd** **Tools**, then **F2** **Voice Commands**, and **2nd** **Voice Settings**.

3. Use the navigation keys to select the setting you want to change. The following options are available:
- **Choice Lists:** If VoiceSignal is not absolutely confident that it has correctly identified a name or number, it can display a choice list of up to three possibilities, and prompt you to confirm the correct one. You can control when choice lists appear by changing the Choice Lists setting to the following:
 - **Automatic:** VoiceSignal displays a choice list when it is not confident it has identified the correct choice from among multiple alternatives.
 - **Always On:** When there are multiple alternatives, VoiceSignal always displays a choice list.
 - **Always Off:** VoiceSignal never displays a choice list. Instead, the application picks the best from among the possible choices.
 - **Sensitivity:** In VoiceSignal, sensitivity controls the balance between rejecting too much, which means the phone frequently does not recognize names, numbers, or commands, and rejecting too little, which means it frequently recognizes something even if nothing was said. When VoiceSignal rejects an utterance, it displays a message such as “Please repeat...” or “No match found.” If you frequently experience these messages, you might be able to get better recognition by adjusting the Sensitivity setting toward **Reject Less**. If you frequently experience false activations (VoiceSignal detects a wrong match), you might be able to get better performance by adjusting the Sensitivity setting toward **Reject More**.
 - **Digit Dialing:** Use the Digit Dialing menu to adapt digit dialing to your voice.
 - **Adapt Digits:** Lets you adapt digits, which can improve voice recognition of phone numbers. Adaptation takes about 60 seconds.

VoiceSignal™

- **Reset Digits:** Erases any digit adaptation you have done and resets digit recognition to the factory default. If you have not adapted digits, this option is grayed out.
- **Sound:** You can customize the VoiceSignal user interface by turning playback on or off for prompts, names, and numbers. You can also change the speed and volume of name playback.
 - **Prompts:** Turns playback on or off for prompts such as "Please say a command."

Note: If you turn prompts off, you can still successfully use VoiceSignal by listening to the expert mode tones in place of the prompts.

- **Digits:** Turns playback on or off for digits, for example, when confirming a phone number.
- **Names:** Turns playback on or off for names.
- **Name Settings:** Adjusts the speed and volume of name playback and Voice Announce Caller ID feature.
- **VoiceMode:** Lets you adapt words, which can improve voice recognition in the PIX messaging and FLIX messaging clients.
 - **Adapt VoiceMode:** Lets you Adapt VoiceMode to your voice, which improves voice recognition of VoiceMode. You must use the adapt VoiceMode feature in a quiet room for best results.
 - **Reset VoiceMode:** Erases any VoiceMode enrollment data that is currently stored. If you have not adapted VoiceMode, this option is grayed out.
 - **Tutorial:** Displays the VoiceMode tutorial.
- **About:** Displays information about VoiceSignal including version number, build number, and device number.

You can also access the VoiceSignal Settings menu by following these steps:

1. In standby mode, press the  key.
2. Press the right soft key  **Settings**.
3. Use the navigation keys to select the setting you want to change.

Adapting VoiceSignal

Voice dialing works well for most people without special adaptation. However, people with strong accents or unique voice characteristics may receive better results after adapting the system to match their voices.

You should adapt Digit Dial only if the system is frequently unable to recognize your speech. After you adapt Digit Dial, your phone is customized to your voice, and your voice only. Others will not be able to use it reliably unless they reset the phone to factory defaults.

Adaptation involves recording several digit sequences to adapt the system to the unique properties of your voice. The adaptation process takes about three minutes.

Tips for adapting Digit Dial

- Adapt digits in a quiet place.
- Make sure you wait for the beep before starting to speak.
- Speak clearly, and say each digit distinctly.
- If you make a mistake while recording a sequence of digits, or if there is an unexpected noise that spoils the recording, re-record that sequence.

- Only adapt digits if you regularly have problems with digit dialing. Once adapted, digit dialing will not work as well for other people using your phone.
- Adapt Digit Dial to your voice.

Digit Dial Adaptation

To access the Adapt Digits menu, follow these steps:

1. At the standby screen, press **0** **MENU**. Use the right navigation key to highlight **SETTINGS & TOOLS**.
2. Press **2** **Tools**, then **1** **Voice Commands**.
3. Press **2** **Voice Settings**, then **3** **Digit Dialing**.
4. **Adapt Digits** is highlighted. Press **0**.
5. A short description of the Adapt Digits displays.
6. Read the description until you are comfortable to proceed, then press **0**.
7. Your phone displays the first digit sequence and “Please say” plays through the speaker followed by the four digits appearing in the display.

Wait for the beep and repeat the digits using your normal tone of voice.

8. After a moment, the phone plays back the recording and prompts “Did the recording sound ok?” If the recording was good, say “Yes.” If you need to re-record, say “No.” If you say “No,” the phone prompts you to pronounce the digits again. Wait for the beep and then re-record. Repeat this step until you’re satisfied with the recording.
9. After confirming that the recording sounds ok, repeat the recording process with the next set of digits. After ten sets of digits, the phone indicates that adaptation is complete.

Reset Digit Dial Adaptation

This option erases an adaptation and resets Digit Dial to its original state.

1. At the standby screen, press **OK** **MENU**. Use the right navigation key to highlight **SETTINGS & TOOLS**.
2. Press **2nd** **Tools**, then **F2** **Voice Commands**.
3. Press **2nd** **Voice Settings**, then **3rd** **Digit Dialing**.
4. Highlight **2nd** **Reset Digits** and press **OK**. The Reset Digit Adaptation screen displays requesting confirmation of reset.

Note: If you have not performed the Adapt Digits function, the Reset Digits option will not be accessible.

5. Press **OK** to proceed. Digit Adaptation Reset is completed.

VoiceSignal Commands

The following is a list of functions that you can perform using VoiceSignal speech recognition on your phone.

- **Call <Name or #>:** Dial by saying a Name in your Contacts List or a Name and a Location (home, work, mobile).
- **Send <Msg Type>:** Send a **Text**, **Picture**, or **Video** message to a number or to someone in your Contacts List.
- **Lookup <Name>:** Open the contact record for any name in your Contacts List.
- **Go to <Menu>:** Open any application installed on your device.
- **Check <Item>:** Provides details of your coverage, signal strength, and battery level.

VoiceSignal™

- **My Account:** Provides detail information about your Verizon Wireless account.
- **Help Guide:** Provide helpful information on how to use VoiceSignal.

Call Name Dialing

To use Name Dial, you'll need to have entries stored in your Contacts list. See page 73 for information on creating a Contacts list.

1. In standby mode, press the  key.
2. After a brief pause, a list of optional commands appears in the display and the audio prompt "Please say a command" plays through the earpiece.
3. As one command, say "Call" followed by a contact entry or phone number. For example, you could say "Call John Smith," "Call John Smith's Mobile," or "Call John Smith at Work." at a distance of 3-12 inches from the phone in a natural voice. The name that you said is repeated through the earpiece and your phone dials the number.
4. If you only say "Call," then "Please say the name, number, voicemail or last number" plays through the earpiece or speakerphone—if it is enabled.
5. To use Name Dialing, say the name of the contact that you want to dial.
6. The name that you said is repeated through the earpiece and your phone dials the number.
7. If VoiceSignal is not sure of the number that you said, a list of possible matches appears in the display.

Section 3

8. You're asked to confirm the correct number as VoiceSignal displays the results. Say "Yes" or "No" to confirm or reject the number when prompted. You may also say "Cancel" to exit VoiceSignal, or, "Repeat" to restart VoiceSignal from the beginning.
9. The location is repeated through the earpiece and your phone dials the number.

Tip: VoiceSignal voice-activates the entire contact list according to the spelling of the entire name field of each contact entry. Remember to say the entire name of the contact you want to dial, exactly as it is spelled in the contact list.

If VoiceSignal has difficulty recognizing a particular name, try editing the contact name to make it unique. Often times, adding a last name into the name field of the contact entry will help. Avoid using abbreviations or unusual spellings in the name field of any contact you wish to name dial.

Call Digit Dialing

Digit Dial allows you to dial any phone number by simply speaking the digits into the phone. No training is necessary, and Digit Dial is programmed to understand natural speech.

1. In standby mode, press the **☎** key.
2. After a brief pause, a list of optional commands appears in the display and the audio prompt "Please say a command" plays through the earpiece or speakerphone—if it is enabled.
3. As a single command, say "Call" followed by a valid 10-digit phone number, such as "Call 6-1-7-5-4-3-2-1-0-1," at a distance of 3-12 inches from the phone in a natural voice. For best results, speak the sequence of

VoiceSignal™

digits naturally and do not pause between each digit. The digits that you say are repeated through the earpiece and your phone dials the number.

4. If you only say "Call," then "Please say the name, number, voicemail or last number" plays through the earpiece.
5. Say the area code and number that you want to dial into the microphone, clearly and naturally. The number that you said is repeated through the earpiece and your phone dials the number.
6. If VoiceSignal is not sure of the number that you said, a list of possible matches appears in the display.
7. You're asked to confirm the correct number as VoiceSignal displays the results. Say "Yes" or "No" to confirm or reject the number when prompted.

Note: For dialing 911 or other special service or emergency numbers, you must use the keypad. VoiceSignal will not recognize 911 or other special service numbers.

Send Message

Send <Msg Type> lets you begin composing any of the following types of messages by simply speaking the type of message and digits or a Contact name into the phone:

- Text
- Picture
- Video

1. In standby mode, press the  key.

2. A list of commands appears in the display and the audio prompt “Please say a command” plays through the earpiece or speakerphone—if it is enabled.
3. Say “Send” (for a Text, Picture, or Video message) or “Send” and a message type (“Text”, “Picture”, or “Video”) as a single command. “Please say the name or number” plays through the earpiece or speakerphone—if it is enabled.
4. Say a name exactly as it is displayed in your Contacts list, first name followed by last name; or say an area code and number into the microphone, clearly and naturally. The number that you said is repeated through the earpiece.
5. The CREATE MESSAGE screen appropriate to the message type you said into the microphone appears in the display with the name or number you said entered in an address field.
6. Complete and send your message. See “Section 7: Messaging” on page 87 for more information.

Name Lookup

To perform a name lookup, you’ll need to have some entries in your Contacts list.

1. In standby mode, press the **Ⓜ** key.
2. A list of commands appears in the display and the audio prompt “Please say a command” plays through the earpiece or speakerphone—if it is enabled.
3. In a single command, say “Lookup” followed by the name of a contact entry at a distance of 3-12 inches from the microphone. For example, you could say “Lookup John Smith.”

VoiceSignal™

4. If you only say “Lookup”, “Please say the name” plays through the earpiece or speakerphone—if it is enabled.
To use Lookup, say the name of the contact that you want to look up.
5. Say the name exactly as it is displayed in your Contacts list, first name followed by last name.
6. The contact name appears in the display with other information that you've entered for that contact.

Opening Apps

The example that follows instructs you how to open Messaging. However, you can open Get It Now, Messaging, Contacts, Recent Calls, and Settings & Tools on your phone using VoiceSignal.

1. In standby mode, press the **Ⓜ** key.
2. A list of commands appears in the display and the audio prompt “Please say a command” plays through the earpiece or speakerphone—if it is enabled.
3. Say “Go To” at a distance of 3-12 inches from the microphone. A list of options displays and a prompt of “Please choose” plays through the earpiece or speakerphone. Speak one of the displayed options:
 - **Get It Now**
 - **Messaging**
 - **Contacts**
 - **Recent Calls**
 - **Settings & Tools**
4. The menu option spoken opens.

Section 3

Checking Your Phone Status

Using VoiceSignal, you can visually and audibly check many useful status indicators by voice, including VoiceMail indicator, Number of messages in your inbox, missed calls, current time, battery strength, signal strength, current volume level.

1. In standby mode, press the **Ⓜ** key.
2. A list of commands appears in the display and the audio prompt "Please say a command" plays through the earpiece or speakerphone—if it is enabled.
3. As a single command, say "Check" followed by one of the status items. Valid "Check" commands are:
 - **"Check Status"** — Displays and announces all of the available status indicators in sequence through the earpiece or speakerphone—if it is enabled.
 - **"Check Voicemail"** — Displays the number of new voicemail messages.
 - **"Check Messages"** — Displays and announces the number of new voicemail, TXT, and PIX messages through the earpiece or speakerphone—if it is enabled.
 - **"Check Missed Calls"** — Displays the missed call log.
 - **"Check Time"** — Displays and announces the current time through the earpiece or speakerphone—if it is enabled.
 - **"Check Battery"** — Displays and announces the current battery level through the earpiece or speakerphone—if it is enabled.
 - **"Check Signal Strength"** — Displays and announces the current EVDO and 1x signal strength levels through the earpiece or speakerphone—if it is enabled.

VoiceSignal™

- **"Check Volume"** — Displays and announces the current master volume setting through the earpiece or speakerphone—if it is enabled.

Checking Your Account Information

Using VoiceSignal, you can check your Verizon account status by voice command.

Note: This feature launches the browser to your account page and requires a data plan and is subject to Verizon's data coverage.

1. In standby mode, press the  key.
2. A list of commands appears in the display and the audio prompt "Please say a command" plays through the earpiece or speakerphone—if it is enabled.
3. Say, "My Account" at a distance of 3-12 inches from the phone in a natural voice.
4. The phone's mobile web browser will launch and display your account information. See Section 11, "Mobile Web," for details about configuring and using your mobile web browser.

Section 4: Menu Navigation

Topics Covered

- Menu Navigation
 - Menu Outline
-

This section explains the menu navigation for your phone. It also includes an outline of all the available menus associated with your phone.

Menu Navigation

Access menus using the navigation keys, two soft keys  , or use a shortcut.

1. In standby mode press  **MENU**. The first of several menus appear in the display.
2. Use the navigation keys to browse phone menus.
3. Press  to enter the menu or sub-menu presently appearing in the display.

Return to the Previous Menu

Press  to return to the previous menu.

Navigate Using Shortcuts

You can also access menus and sub-menus using menu numbers. This method is often called a “shortcut.” To shortcut to a menu or sub-menu, press  **MENU**, then enter the menu and/or sub-menu number(s) for the feature in question. Use “Navigation Key Shortcuts” on page 57, for looking up the menu shortcut number.

1. In standby mode, press  **MENU**. The  **CONTACTS** menu is launched.
2. Press the number of the menu, sub-menu, and so on to arrive at the desired feature.
3. Press  **MENU**, then press  **3rd Groups**,  **2nd Business**.

Navigation Key Shortcuts

In standby mode, press a navigation key (as illustrated below) to launch its corresponding application.

Section 4

*The Shortcut menu is set to Calendar by default, but it can be customized to select other functions instead. See also “Shortcut Key” on page 119 for more information.

Quick Search

With the **Quick Search** option set to **On** (see also “Quick Search” on page 126 for more information), you can identify and select menu options by entering numbers that represent the first few letters of the name of the menu option.

For example:

1. In standby mode, press **5th** **2nd** **6th** **4th**. The number entry screen appears in the display with the numbers “5264” showing.
2. Press the down navigation key. The **MENU LIST** screen appears in the display with the **Language** option showing and highlighted.

3. Press . The **LANGUAGE** screen appears in the display with the current Language option setting showing.

Voice Menu Readout

With **Menu Readout** set to **On** (see also “Menu Readout” on page 173 for more information), you can hear your phone “read” main menu items through the earpiece when you highlight each one.

The In-Use Option

Access numerous menus and features even while on a call.

Note: If the call is disconnected while accessing the In-Use Option, the In-Use Option disappears from the display and the phone eventually returns to standby mode.

1. While in a call, press the right soft key  **Options**. The following menu items appear in the display.
 - **Message:** Open the Messages menu.
 - **Contacts:** Open the contacts to view.
 - **Recent Calls:** Display your recent incoming, missed and outgoing calls.
 - **Send DTMF:** Sends keypad tones.
 - **Voice Privacy:** Prevent recipients of your calls from seeing your number on their display. Select from standard or enhanced options.
 - **Location:** Identifies your location to the network.
 - **Voice Memo:** Record a voice memo.
2. Use the navigation key to highlight a menu. Press  to open the highlighted menu or to activate the feature.

Section 5: Entering Text

Topics Covered

- Changing the Text Entry Mode
 - Using Word Mode
 - Entering Upper and Lower Case
 - Entering Symbols
 - Entering Numbers
-

This section outlines how to select the desired text input mode when entering characters into your phone. This section also describes how to use the T9 predictive text entry system to reduce the amount of key strokes associated with entering text.

Changing the Text Entry Mode

1. While composing a message in the Text area, press the right soft key **Options** to display the following options:
 - **Add:** Allows you to add more information or multimedia items to your message.
 - **Graphics:** Lists preloaded and downloaded graphics to add to the message.
 - **Animations:** Lists preloaded and downloaded animations to add to the message.
 - **Sounds:** Lists preloaded and downloaded sounds to add to the message.
 - **Quick Text:** Choose from up to 22 messages.
 - **Name Card:** Select from My Name Card or Contacts to add to the message.
 - **Edit Text Format:** Change text font size, alignment, style, and color.
 - **Save As Draft:** Save the message to your Draft folder.
 - **Priority Level:** Save the message with a High or Normal priority.
 - **Callback #:** Provides the option to send a callback number with the message.
 - **Validity Period:** Save the message for the assigned period of time.
 - **Deferred Delivery:** Save the message to be delivered at the assigned delivery date and time.
 - **Enh. Delivery Ack:** Displays a pop-up screen notifying the message sent has been received.
 - **Add To Contacts:** Save the recipients number to your Contacts as a new entry or add to an existing entry.

Using Word Mode

2. While composing a message, press left soft key  **Abc** to display a pop-up menu with the following Text Entry Mode options:
 - **Word**
 - **Abc**
 - **ABC**
 - **123**
 - **Symbols**

Using Word Mode

Word recognizes the most commonly used word for any sequence of key presses and inserts that word into your message. It's much faster than the traditional method of text entry (**Abc**) and requires only one key press per letter of the word that you're spelling.

1. In standby mode, press the left soft key  **Message**, then press  **New Msg**,  **TXT Msg** to compose a new text message.
2. Enter the phone number or email address of the recipient, then press the down navigation key to move to the Text field.
3. Press the left soft key  **Abc** to display a pop-up menu containing text entry mode options.
4. **Abc** is highlighted by default. Use the up/down navigation keys to highlight **Word**, then press .

Now, for practice, enter the word “Hello” into your message by pressing each of the following keys only once:

Word recognizes that the most frequently used word for the sequence you entered is “Hello.” If more than one word shares the same sequence, Word provides the most common. Press **0a** to display other words in the dictionary, if available.

Section 5

Entering Upper and Lower Case

- Enter characters while in **ABC** mode by pressing the key that contains the desired characters **4prt** for “H”.
- Press the key repeatedly to cycle through other available characters for that key.
- Pause briefly when the desired character appears in the display to accept the character and therefore insert it into the message.
- Press **#** to enter a space.
- To cycle between uppercase, lower case, and initial caps for characters in **ABC** mode, briefly press ***+1**.

Entering Symbols

Symbol mode enables you to enter symbols such as @ or % into a text message.

1. In standby mode, press the left soft key **Message**, then press **f01 New Msg**, **f02 TXT Msg** to compose a new text message.

2. Enter the phone number or email address of the recipient, then press the down navigation key to enter text.
3. Press the left soft key  **Abc** to display a pop-up menu containing the text entry mode options.
4. **Abc** is highlighted by default. Use the up/down navigation keys to highlight **Symbols**, then press . The first of three screens containing symbols appears in the display.
5. Press  **Prev** or  **Next** to page through the other symbols, if necessary.
6. Enter the key that corresponds with the symbol that you wish to enter. For example, press  for an exclamation point (!) on the first page of symbols.
7. Repeat steps 3 through 6 to insert as many symbols into your message as desired.

Entering Numbers

Enter numbers into a text message while in number mode (**123**). See "Changing the Text Entry Mode" on page 66 for instructions on changing text entry modes.

1. In standby mode, press the left soft key  **Message**, then press  **New Msg**,  **TXT Msg** to compose a new text message.
2. Enter the phone number or email address of the recipient, then press the down navigation key to enter text.
3. Press the left soft key  **Abc** to display a pop-up menu containing the text entry mode options.

- 4. **Abc**** is highlighted by default. Use the up/down navigation keys to highlight **123**, then press .

11. Press . "CONTACT UPDATED" appears in the display.

Adding Pauses

Calls to automated systems often require a password or account number. Instead of manually entering numbers each time, store the numbers to your Contacts along with special characters called pauses.

- **Wait:** A hard pause stops the calling sequence until further input from you.
- **2-sec pause:** A two-second pause stops the calling sequence for two seconds and then automatically sends the remaining digits.
 1. In standby mode, enter the number.
 2. Press  **Options** use the navigation key to highlight **Wait** or **2-sec Pause** and press .
 3. Continue with Step 2, Method 2 of **Adding a Contact**.

Note: Entering multiple two-second pauses extends the length of a pause. For example, two consecutive two-second pauses cause a total pause time of four seconds. Keep in mind pauses count as digits towards the 48-digit maximum.

Contact Groups

You can place any Contact entry into one of five categories, called “**Groups**.” Groups allow you to search your Contacts faster, quickly send messages to one or more group members, and more.

Bluetooth Settings

About Bluetooth

Bluetooth is a short-range wireless communications technology capable of exchanging information over a distance of about 30 feet without requiring a physical connection.

Unlike infrared, you don't need to line up the devices to beam information with Bluetooth. If the devices are within a range of one another, you can exchange information between them, even if they are located in different rooms.

Note: For optimal user experience when using the Bluetooth earpiece, enable the Key/EarMic option in the Voice Commands Voice Dial menu. This will allow you to place calls with a Bluetooth earpiece using the Voice Dial feature in hands-free mode.

Bluetooth Service Profiles

Actually, the Bluetooth specification is a protocol that describes how the short-range wireless technology works, whereas individual profiles describe the services supported by individual devices. Profiles reduce the chance that different devices will not work together.

Your phone supports the following profile:

- HSP: Mono-headset Profile
- HFP: Hands Free Protocol*
- SPP: Serial Port Profile
- DUN: Dial Up Network Profile
- BPP: Basic Print Profile

* For vehicle/accessory compatibility, go to www.verizonwireless.com/bluetoothchart
Phone does not support all Bluetooth OBEX profiles.

The following Bluetooth options are available:

On/Off

When the Bluetooth radio is turned on, you can use the Bluetooth features available. When the Bluetooth radio is turned off, you cannot send or receive information via Bluetooth.

To save battery life or in situations where radio use is prohibited, such as airline traveling, you can turn off the Bluetooth wireless technology.

1. In standby mode, press  **MENU** key and use the right navigation key to highlight  **SETTINGS & TOOLS**. Press  **Bluetooth**. The **Bluetooth** menus are listed in the display.
2. Press  to turn Bluetooth **On** or **Off**.

Note: If activated, the  Bluetooth icon displays.

Search

This option searches for a recognized Bluetooth wireless technology device.

1. In standby mode, press  **MENU**, use the right navigation key to highlight  **SETTINGS & TOOLS**. Press  **Bluetooth**. The **Bluetooth** menus are listed in the display.
2. **Add New Device** is highlighted, press .

Note: If you have NOT already activated Bluetooth on the phone, the message "TURN BLUETOOTH ON?" displays. Highlight **Yes** to activate or **No** to exit and press .

3. A list of found Bluetooth devices will be displayed. Use the **Up** and **Down** navigation keys to highlight a Bluetooth device. Press  to pair the devices.
4. Enter the passkey (0000 for most devices) and press  to pair with the device you selected. The Bluetooth Connected icon () appears in the display.

Bluetooth Settings

The Bluetooth wireless technology settings menu provides the ability to view and change the device name, show the visibility, and set the security for the device.

1. In standby mode, press  **MENU**, use the right navigation key to highlight  **SETTINGS & TOOLS**. Press  **Bluetooth**. The **Bluetooth** menus are listed in the display.
2. Press  **Settings**. The Bluetooth menu displays with the following options:
 - **My Phone Name**: allows you enter a customized name.
 - **Discovery Mode**: allows other users to see your accessibility. Select **On** for other devices to see your device, or **Off** for no visibility. (For more information, refer to your Bluetooth device documentation.)
 - **My Phone Info**: shows the handset information.

Note: When a Bluetooth headset is paired with the phone, the button on the Bluetooth headset will launch VoiceSignal voice recognition over the Bluetooth link.

Also, VoiceSignal will use the Bluetooth headset to play prompts and record speech.

Also, you can pair a Bluetooth printer with your phone and print pictures. See “To use PictBridge with a Bluetooth printer to print pictures from your phone:” on page 167 for more information.

Place a Call While Using Mobile Web

Note: This feature is currently unavailable outside of the United States. Only available within the Verizon Wireless Enhanced Services Area.

You can place a call while using Mobile Web if the website supports this feature. Press the appropriate soft key to call the number. In most cases you can also press  to call the number. The Internet connection terminates when you initiate the call. After you end the call, your phone returns to standby mode.

This section outlines the safety precautions associated with using your phone. These safety precautions should be followed to safely use your phone.

Health and Safety Information

Exposure to Radio Frequency (RF) Signals

Certification Information (SAR)

Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the exposure limits for radio frequency (RF) energy set by the Federal Communications Commission (FCC) of the U.S. government. These FCC exposure limits are derived from the recommendations of two expert organizations, the National Council on Radiation Protection and Measurement (NCRP) and the Institute of Electrical and Electronics Engineers (IEEE). In both cases, the recommendations were developed by scientific and engineering experts drawn from industry, government, and academia after extensive reviews of the scientific literature related to the biological effects of RF energy.

The exposure limit set by the FCC for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate (SAR). The SAR is a measure of the rate of absorption of RF energy by the human body expressed in units of watts per kilogram (W/kg). The FCC requires wireless phones to comply with a safety limit of 1.6 watts per kilogram (1.6 W/kg). The FCC exposure limit incorporates a substantial margin of safety to give additional protection to the public and to account for any variations in measurements.

SAR tests are conducted using standard operating positions accepted by the FCC with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined

at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output.

Before a new model phone is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the exposure limit established by the FCC. Tests for each model phone are performed in positions and locations (e.g. at the ear and worn on the body) as required by the FCC. For body worn operation, this phone has been tested and meets FCC RF exposure guidelines when used with an accessory that contains no metal and that positions the handset a minimum of 1.5 cm from the body. Use of other accessories may not ensure compliance with FCC RF exposure guidelines.

The FCC has granted an Equipment Authorization for this mobile phone with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. The maximum SAR values for this model phone as reported to the FCC are:

- **Part 22**

Head: 1.09 W/kg

Body-worn: 0.841 W/kg

- **Part 24**

Head: 1.01 W/kg

Bodyworn: 0.422 W/kg

SAR information on this and other model phones can be viewed on-line at www.fcc.gov/oet/fccid. To find information that pertains to a particular model phone, this site uses the phone FCC ID number which is usually printed somewhere on the case of the phone. Sometimes it may be necessary to remove the battery pack to find the number. Once you have the FCC ID number for a particular phone, follow the instructions on the website and it should provide values for typical or maximum SAR for a particular phone. Additional product specific SAR information can also be obtained at www.fcc.gov/cgb/sar.

Consumer Information on Wireless Phones

The U.S. Food and Drug Administration (FDA) has published a series of Questions and Answers for consumers relating to radio frequency (RF) exposure from wireless phones. The FDA publication includes the following information:

What kinds of phones are the subject of this update?

The term wireless phone refers here to hand-held wireless phones with built-in antennas, often called "cell," "mobile," or "PCS" phones. These types of wireless phones can expose the user to measurable radio frequency energy (RF) because of the short distance between the phone and the user's head. These RF exposures are limited by Federal Communications Commission safety guidelines that were developed with the advice of FDA and other federal health and safety agencies. When the phone is located at greater distances from the user, the exposure to RF is drastically lower because a person's RF exposure decreases rapidly with increasing distance from the source. The so-called "cordless phones," which have a base unit connected to the telephone wiring in a house, typically operate at far lower power levels, and thus produce RF exposures well within the FCC's compliance limits.

Do wireless phones pose a health hazard?

The available scientific evidence does not show that any health problems are associated with using wireless phones. There is no proof, however, that wireless phones are absolutely safe. Wireless phones emit low levels of radio frequency energy (RF) in the microwave range while being used. They also emit very low levels of RF when in the stand-by mode. Whereas high levels of RF can

Section 12

produce health effects (by heating tissue), exposure to low level RF that does not produce heating effects causes no known adverse health effects. Many studies of low level RF exposures have not found any biological effects. Some studies have suggested that some biological effects may occur, but such findings have not been confirmed by additional research. In some cases, other researchers have had difficulty in reproducing those studies, or in determining the reasons for inconsistent results.

What is FDA's role concerning the safety of wireless phones?

Under the law, FDA does not review the safety of radiation-emitting consumer products such as wireless phones before they can be sold, as it does with new drugs or medical devices. However, the agency has authority to take action if wireless phones are shown to emit radio frequency energy (RF) at a level that is hazardous to the user. In such a case, FDA could require the manufacturers of wireless phones to notify users of the health hazard and to repair, replace or recall the phones so that the hazard no longer exists.

Although the existing scientific data do not justify FDA regulatory actions, FDA has urged the wireless phone industry to take a number of steps, including the following:

- Support needed research into possible biological effects of RF of the type emitted by wireless phones;
- Design wireless phones in a way that minimizes any RF exposure to the user that is not necessary for device function; and

Consumer Information on Wireless Phones

- Cooperate in providing users of wireless phones with the best possible information on possible effects of wireless phone use on human health.

FDA belongs to an interagency working group of the federal agencies that have responsibility for different aspects of RF safety to ensure coordinated efforts at the federal level. The following agencies belong to this working group:

- National Institute for Occupational Safety and Health
- Environmental Protection Agency
- Federal Communications Commission
- Occupational Safety and Health Administration
- National Telecommunications and Information Administration

The National Institutes of Health participates in some interagency working group activities, as well.

FDA shares regulatory responsibilities for wireless phones with the Federal Communications Commission (FCC). All phones that are sold in the United States must comply with FCC safety guidelines that limit RF exposure. FCC relies on FDA and other health agencies for safety questions about wireless phones.

FCC also regulates the base stations that the wireless phone networks rely upon. While these base stations operate at higher power than do the wireless phones themselves, the RF exposures that people get from these base stations are typically thousands of times lower than those they can get from wireless phones. Base stations are thus not the primary subject of the safety questions discussed in this document.

What are the results of the research done already?

The research done thus far has produced conflicting results, and many studies have suffered from flaws in their research methods. Animal experiments investigating the effects of radio frequency energy (RF) exposures characteristic of wireless phones have yielded conflicting results that often cannot be repeated in other laboratories. A few animal studies, however, have suggested that low levels of RF could accelerate the development of cancer in laboratory animals. However, many of the studies that showed increased tumor development used animals that had been genetically engineered or treated with cancer-causing chemicals so as to be pre-disposed to develop cancer in absence of RF exposure. Other studies exposed the animals to RF for up to 22 hours per day. These conditions are not similar to the conditions under which people use wireless phones, so we don't know with certainty what the results of such studies mean for human health.

Three large epidemiology studies have been published since December 2000. Between them, the studies investigated any possible association between the use of wireless phones and primary brain cancer, glioma, meningioma, or acoustic neuroma, tumors of the brain or salivary gland, leukemia, or other cancers. None of the studies demonstrated the existence of any harmful health effects from wireless phones RF exposures. However, none of the studies can answer questions about long-term exposures, since the average period of phone use in these studies was around three years.

What research is needed to decide whether RF exposure from wireless phones poses a health risk?

A combination of laboratory studies and epidemiological studies of people actually using wireless phones would provide some of the data that are needed. Lifetime animal exposure studies could be completed in a few years. However, very large numbers of animals would be needed to provide reliable proof of a cancer promoting effect if one exists. Epidemiological studies can provide data that is directly applicable to human populations, but ten or more years' follow-up may be needed to provide answers about some health effects, such as cancer. This is because the interval between the time of exposure to a cancer-causing agent and the time tumors develop - if they do - may be many, many years. The interpretation of epidemiological studies is hampered by difficulties in measuring actual RF exposure during day-to-day use of wireless phones. Many factors affect this measurement, such as the angle at which the phone is held, or which model of phone is used.

What is FDA doing to find out more about the possible health effects of wireless phone RF?

FDA is working with the U.S. National Toxicology Program and with groups of investigators around the world to ensure that high priority animal studies are conducted to address important questions about the effects of exposure to radio frequency energy (RF).

FDA has been a leading participant in the World Health Organization international Electromagnetic Fields (EMF) Project since its inception in 1996. An influential result of

Section 12

this work has been the development of a detailed agenda of research needs that has driven the establishment of new research programs around the world. The Project has also helped develop a series of public information documents on EMF issues.

FDA and Cellular Telecommunications & Internet Association (CTIA) have a formal Cooperative Research and Development Agreement (CRADA) to do research on wireless phone safety. FDA provides the scientific oversight, obtaining input from experts in government, industry, and academic organizations. CTIA-funded research is conducted through contracts to independent investigators. The initial research will include both laboratory studies and studies of wireless phone users. The CRADA will also include a broad assessment of additional research needs in the context of the latest research developments around the world.

What steps can I take to reduce my exposure to radio frequency energy from my wireless phone?

If there is a risk from these products - and at this point we do not know that there is - it is probably very small. But if you are concerned about avoiding even potential risks, you can take a few simple steps to minimize your exposure to radio frequency energy (RF). Since time is a key factor in how much exposure a person receives, reducing the amount of time spent using a wireless phone will reduce RF exposure.

- If you must conduct extended conversations by wireless phone every day, you could place more distance between your body and the source of the RF, since the exposure level drops off dramatically with distance. For example, you could use a

Consumer Information on Wireless Phones

headset and carry the wireless phone away from your body or use a wireless phone connected to a remote antenna.

Again, the scientific data do not demonstrate that wireless phones are harmful. But if you are concerned about the RF exposure from these products, you can use measures like those described above to reduce your RF exposure from wireless phone use.

What about children using wireless phones?

The scientific evidence does not show a danger to users of wireless phones, including children and teenagers. If you want to take steps to lower exposure to radio frequency energy (RF), the measures described above would apply to children and teenagers using wireless phones.

Reducing the time of wireless phone use and increasing the distance between the user and the RF source will reduce RF exposure.

Some groups sponsored by other national governments have advised that children be discouraged from using wireless phones at all. For example, the government in the United Kingdom distributed leaflets containing such a recommendation in December 2000. They noted that no evidence exists that using a wireless phone causes brain tumors or other ill effects. Their recommendation to limit wireless phone use by children was strictly precautionary; it was not based on scientific evidence that any health hazard exists.

Do hands-free kits for wireless phones reduce risks from exposure to RF emissions?

Since there are no known risks from exposure to RF emissions from wireless phones, there is no reason to

Section 12

believe that hands-free kits reduce risks. Hands-free kits can be used with wireless phones for convenience and comfort. These systems reduce the absorption of RF energy in the head because the phone, which is the source of the RF emissions, will not be placed against the head. On the other hand, if the phone is mounted against the waist or other part of the body during use, then that part of the body will absorb more RF energy. Wireless phones marketed in the U.S. are required to meet safety requirements regardless of whether they are used against the head or against the body. Either configuration should result in compliance with the safety limit.

Do wireless phone accessories that claim to shield the head from RF radiation work?

Since there are no known risks from exposure to RF emissions from wireless phones, there is no reason to believe that accessories that claim to shield the head from those emissions reduce risks. Some products that claim to shield the user from RF absorption use special phone cases, while others involve nothing more than a metallic accessory attached to the phone. Studies have shown that these products generally do not work as advertised. Unlike "hand-free" kits, these so-called "shields" may interfere with proper operation of the phone. The phone may be forced to boost its power to compensate, leading to an increase in RF absorption. In February 2002, the Federal Trade Commission (FTC) charged two companies that sold devices that claimed to protect wireless phone users from radiation with making false and unsubstantiated claims. According to FTC, these

defendants lacked a reasonable basis to substantiate their claim.

What about wireless phone interference with medical equipment?

Radio frequency energy (RF) from wireless phones can interact with some electronic devices. For this reason, FDA helped develop a detailed test method to measure electromagnetic interference (EMI) of implanted cardiac pacemakers and defibrillators from wireless telephones. This test method is now part of a standard sponsored by the Association for the Advancement of Medical Instrumentation (AAMI). The final draft, a joint effort by FDA, medical device manufacturers, and many other groups, was completed in late 2000. This standard will allow manufacturers to ensure that cardiac pacemakers and defibrillators are safe from wireless phone EMI. FDA has tested wireless phones and helped develop a voluntary standard sponsored by the Institute of Electrical and Electronic Engineers (IEEE). This standard specifies test methods and performance requirements for hearing aids and wireless phones so that no interference occurs when a person uses a compatible phone and a compatible hearing aid at the same time. This standard was approved by the IEEE in 2000.

FDA continues to monitor the use of wireless phones for possible interactions with other medical devices. Should harmful interference be found to occur, FDA will conduct testing to assess the interference and work to resolve the problem.

Road Safety

Your wireless phone gives you the powerful ability to communicate by voice, almost anywhere, anytime. But an important responsibility accompanies the benefits of wireless phones, one that every user must uphold.

When driving a car, driving is your first responsibility. When using your wireless phone behind the wheel of a car, practice good common sense and remember the following tips:

1. Get to know your wireless phone and its features, such

- as speed dial and redial. If available, these features help you to place your call without taking your attention off the road.
2. When available, use a hands-free device. If possible, add an additional layer of convenience and safety to your wireless phone with one of the many hands free accessories available today.
 3. Position your wireless phone within easy reach. Be able to access your wireless phone without removing your eyes from the road. If you get an incoming call at an inconvenient time, let your voicemail answer it for you.
 4. Let the person you are speaking with know you are driving; if necessary, suspend the call in heavy traffic or hazardous weather conditions. Rain, sleet, snow, ice and even heavy traffic can be hazardous.
 5. Do not take notes or look up phone numbers while driving. Jotting down a "to do" list or flipping through your address book takes attention away from your primary responsibility, driving safely.
 6. Dial sensibly and assess the traffic; if possible, place calls when you are not moving or before pulling into traffic. Try to plan calls when your car will be stationary. If you need to make a call while moving, dial only a few numbers, check the road and your mirrors, then continue.

Section 12

7. Do not engage in stressful or emotional conversations that may be distracting. Make people you are talking with aware you are driving and suspend conversations that have the potential to divert your attention from the road.
8. Use your wireless phone to call for help. Dial 9-1-1 or other local emergency number in the case of fire, traffic accident or medical emergencies. Remember, it is a free call on your wireless phone!
9. Use your wireless phone to help others in emergencies. If you see an auto accident, crime in progress or other serious emergency where lives are in danger, call 9-1-1 or other local emergency number, as you would want others to do for you.
10. Call roadside assistance or a special non-emergency wireless assistance number when necessary. If you see a broken-down vehicle posing no serious hazard, a broken traffic signal, a minor traffic accident where no one appears injured, or a vehicle you know to be stolen, call roadside assistance or other special non-emergency number.

"The wireless industry reminds you to use your phone safely when driving."

Operating Environment

Remember to follow any special regulations in force in any area and always switch your phone off whenever it is forbidden to use it, or when it may cause interference or danger. When connecting the phone or any accessory to another device, read its user's guide for detailed safety instructions. Do not connect incompatible products.

As with other mobile radio transmitting equipment, users are advised that for the satisfactory operation of the equipment and for the safety of personnel, it is recommended that the equipment should only be used in the normal operating position (held to your ear with the antenna pointing over your shoulder if you are using an external antenna).

Using Your Phone Near Other Electronic Devices

Most modern electronic equipment is shielded from radio frequency (RF) signals. However, certain electronic equipment may not be shielded against the RF signals from your wireless phone. Consult the manufacturer to discuss alternatives.

Pacemakers

Pacemaker manufacturers recommend that a minimum distance of 15 cm (6 inches) be maintained between a wireless phone and a pacemaker to avoid potential interference with the pacemaker.

These recommendations are consistent with the independent research and recommendations of Wireless Technology Research.

Persons with pacemakers:

- should always keep the phone more than 15 cm (6 inches) from their pacemaker when the phone is switched on.
- should not carry the phone in a breast pocket.
- should use the ear opposite the pacemaker to minimize potential interference.

If you have any reason to suspect that interference is taking place, switch your phone off immediately.

Hearing Aid Compatibility with Mobile Phones

When some mobile phones are used near some hearing devices (hearing aids and cochlear implants), users may detect a buzzing, humming, or whining noise. Some hearing devices are more immune than others to this interference noise, and phones also vary in the amount of interference they generate.

The wireless telephone industry has developed ratings for some of their mobile phones, to assist hearing device users in finding phones that may be compatible with their hearing devices. Not all phones have been rated. Phones that are rated have the rating on their box or a label on the box.

The ratings are not guarantees. Results will vary depending on the user's hearing device and hearing loss. If your hearing device happens to be vulnerable to interference, you may not be able to use a rated phone successfully. Trying out the phone with your hearing device is the best way to evaluate it for your personal needs.

Using Your Phone Near Other Electronic Devices

Section 12

M-Ratings: Phones rated M3 or M4 meet FCC requirements and are likely to generate less interference to hearing devices than phones that are not labeled. M4 is the better/higher of the two ratings.

T-Ratings: Phones rated T3 or T4 meet FCC requirements and are likely to be more usable with a hearing device's telecoil ("T Switch" or "Telephone Switch") than unrated phones. T4 is the better/higher of the two ratings. (Note that not all hearing devices have telecoils in them.)

Hearing devices may also be measured for immunity to this type of interference. Your hearing device manufacturer or hearing health professional may help you find results for your hearing device. The more immune your hearing aid is, the less likely you are to experience interference noise from mobile phones.

Other Medical Devices

If you use any other personal medical devices, consult the manufacturer of your device to determine if it is adequately shielded from external RF energy. Your physician may be able to assist you in obtaining this information. Switch your phone off in health care facilities when any regulations posted in these areas instruct you to do so. Hospitals or health care facilities may be using equipment that could be sensitive to external RF energy.

Vehicles

RF signals may affect improperly installed or inadequately shielded electronic systems in motor vehicles. Check with the manufacturer or its representative regarding your vehicle. You should also

consult the manufacturer of any equipment that has been added to your vehicle.

Posted Facilities

Switch your phone off in any facility where posted notices require you to do so.

Potentially Explosive Environments

Switch your phone off when in any area with a potentially explosive atmosphere and obey all signs and instructions. Sparks in such areas could cause an explosion or fire resulting in bodily injury or even death.

Users are advised to switch the phone off while at a refueling point (service station). Users are reminded of the need to observe restrictions on the use of radio equipment in fuel depots

(fuel storage and distribution areas), chemical plants or where blasting operations are in progress.

Areas with a potentially explosive atmosphere are often but not always clearly marked. They include below deck on boats, chemical transfer or storage facilities, vehicles using liquefied petroleum gas (such as propane or butane), areas where the air contains chemicals or particles, such as grain, dust or metal powders, and any other area where you would normally be advised to turn off your vehicle engine.

Emergency Calls

This phone, like any wireless phone, operates using radio signals, wireless and landline networks as well as user-programmed functions, which cannot guarantee

Emergency Calls

Section 12

connection in all conditions. Therefore, you should never rely solely on any wireless phone for essential communications (medical emergencies, for example).

Remember, to make or receive any calls the phone must be switched on and in a service area with adequate signal strength. Emergency calls may not be possible on all wireless phone networks or when certain network services and/or phone features are in use. Check with local service providers.

To make an emergency call:

1. If the phone is not on, switch it on.
2. Key in the emergency number for your present location (for example, 911 or other official emergency number). Emergency numbers vary by location.
3. Press the **Send** key ()

If certain features are in use (call barring, for example), you may first need to deactivate those features before you can make an emergency call. Consult this document and your local cellular service provider.

When making an emergency call, remember to give all the necessary information as accurately as possible.

Remember that your phone may be the only means of communication at the scene of an accident; do not cut off the call until given permission to do so.

Restricting Children's access to your Phone

Your phone is not a toy. Children should not be allowed to play with it because they could hurt themselves and others, damage the phone or make calls that increase your phone bill.

FCC Notice and Cautions

FCC Notice

The phone may cause TV or radio interference if used in close proximity to receiving equipment. The FCC can require you to stop using the phone if such interference cannot be eliminated.

Vehicles using liquefied petroleum gas (such as propane or butane) must comply with the National Fire Protection Standard (NFPA-58). For a copy of this standard, contact the National Fire Protection Association, One Batterymarch Park, Quincy, MA 02269, Attn: Publication Sales Division.

Cautions

Any changes or modifications to your phone not expressly approved in this document could void your warranty for this equipment, and void your authority to operate this equipment. Only use approved batteries, antennas and chargers. The use of any unauthorized accessories may be dangerous and void the phone warranty if said accessories cause damage or a defect to the phone.

Although your phone is quite sturdy, it is a complex piece of equipment and can be broken. Avoid dropping, hitting, bending or sitting on it.

Other Important Safety Information

- Only qualified personnel should service the phone or install the phone in a vehicle. Faulty installation or service may be dangerous and may invalidate any warranty applicable to the device.

Product Performance

- Check regularly that all wireless phone equipment in your vehicle is mounted and operating properly.
- Do not store or carry flammable liquids, gases or explosive materials in the same compartment as the phone, its parts or accessories.
- For vehicles equipped with an air bag, remember that an air bag inflates with great force. Do not place objects, including both installed or portable wireless equipment in the area over the air bag or in the air bag deployment area. If wireless equipment is improperly installed and the air bag inflates, serious injury could result.
- Switch your phone off before boarding an aircraft. The use of wireless phone in aircraft is illegal and may be dangerous to the aircraft's operation.
- Failure to observe these instructions may lead to the suspension or denial of telephone services to the offender, or legal action, or both.

Section 12

Product Performance

Getting the Most Out of Your Signal Reception

The quality of each call you make or receive depends on the signal strength in your area. Your phone informs you of the current signal strength by displaying a number of bars next to the signal strength icon. The more bars displayed, the stronger the signal.

If you're inside a building, being near a window may give you better reception.

Understanding the Power Save Feature

If your phone is unable to find a signal after 15 minutes of searching, a Power Save feature is automatically activated. If your phone is active, it periodically rechecks

service availability or you can check it yourself by pressing any key.

Anytime the Power Save feature is activated, a message displays on the screen. When a signal is found, your phone returns to standby mode.

Understanding How Your Phone Operates

Your phone is basically a radio transmitter and receiver. When it's turned on, it receives and transmits radio frequency (RF) signals. When you use your phone, the system handling your call controls the power level. This power can range from 0.006 watts to 0.2 watts in digital mode.

Maintaining Your Phone's Peak Performance

For the best care of your phone, only authorized personnel should service your phone and accessories. Faulty service may void the warranty.

There are several simple guidelines to operating your phone properly and maintaining safe, satisfactory service.

- If your phone is equipped with an external antenna, hold the phone with the antenna raised, fully-extended and over your shoulder.
- Do not hold, bend or twist the phone's antenna, if applicable.
- Do not use the phone if the antenna is damaged.
- If your phone is equipped with an internal antenna, obstructing the internal antenna could inhibit call performance.
- Speak directly into the phone's receiver.

Availability of Various Features/Ring Tones

- Avoid exposing your phone and accessories to rain or liquid spills. If your phone does get wet, immediately turn the power off and remove the battery. If it is inoperable, call Customer Care for service.

Availability of Various Features/Ring Tones

Many services and features are network dependent and may require additional subscription and/or usage charges. Not all features are available for purchase or use in all areas. Downloadable Ring Tones may be available at an additional cost. Other conditions and restrictions may apply. See your service provider for additional information.

Battery Standby and Talk Time

Standby and talk times will vary depending on phone usage patterns and conditions. Battery power consumption depends on factors such as network configuration, signal strength, operating temperature, features selected, frequency of calls, and voice, data, and other application usage patterns.

Battery Precautions

- Avoid dropping the cell phone. Dropping it, especially on a hard surface, can potentially cause damage to the phone and battery. If you suspect damage to the phone or battery, take it to a service center for inspection.
- Never use any charger or battery that is damaged in any way.
- Use the battery only for its intended purpose.
- If you use the phone near the network's base station, it uses less power; talk and standby time are greatly affected by the signal strength on the cellular network and the parameters set by the network operator.

**Section 12**

- Follow battery usage, storage and charging guidelines found in the user's guide.
- Battery charging time depends on the remaining battery charge and the type of battery and charger used. The battery can be charged and discharged hundreds of times, but it will gradually wear out. When the operation time (talk time and standby time) is noticeably shorter than normal, it is time to buy a new battery.
- If left unused, a fully charged battery will discharge itself over time.
- Use only Samsung-approved batteries and recharge your battery only with Samsung-approved chargers. When a charger is not in use, disconnect it from the power source. Do not leave the battery connected to a charger for more than a week, since overcharging may shorten its life.
- Do not use incompatible cell phone batteries and chargers. Some Web sites and second-hand dealers, not associated with reputable manufacturers and carriers, might be selling incompatible or even counterfeit batteries and chargers. Consumers should purchase manufacturer or carrier recommended products and accessories. If unsure about whether a replacement battery or charger is compatible, contact the manufacturer of the battery or charger.
- Extreme temperatures will affect the charging capacity of your battery: it may require cooling or warming first.
- Do not leave the battery in hot or cold places, such as in a car in summer or winter conditions, as you will reduce the capacity and lifetime of the battery. Always try to keep the battery at room temperature. A phone with a hot or cold battery may temporarily not work, even when the battery is fully charged. Li-ion batteries are particularly affected by temperatures below 0 °C (32 °F).
- Do not place the phone in areas that may get very hot, such as on or near a cooking surface, cooking appliance, iron, or radiator.

Care and Maintenance

Section 12

- Do not get your phone or battery wet. Even though they will dry and appear to operate normally, the circuitry could slowly corrode and pose a safety hazard.
- Do not short-circuit the battery. Accidental short-circuiting can occur when a metallic object (coin, clip or pen) causes a direct connection between the + and - terminals of the battery (metal strips on the battery), for example when you carry a spare battery in a pocket or bag. Short-circuiting the terminals may damage the battery or the object causing the short-circuiting.
- Do not permit a battery out of the phone to come in contact with metal objects, such as coins, keys or jewelry.
- Do not crush, puncture or put a high degree of pressure on the battery as this can cause an internal short-circuit, resulting in overheating.
- Dispose of used batteries in accordance with local regulations. In some areas, the disposal of batteries in household or business trash may be prohibited. For safe disposal options for Li-Ion batteries, contact your nearest Samsung authorized service center. Always recycle. Do not dispose of batteries in a fire.

Care and Maintenance

Your phone is a product of superior design and craftsmanship and should be treated with care. The suggestions below will help you fulfill any warranty obligations and allow you to enjoy this product for many years

- Keep the phone and all its parts and accessories out of the reach of small children.
- Keep the phone dry. Precipitation, humidity and liquids contain minerals that will corrode electronic circuits.
- Do not use the phone with a wet hand. Doing so may cause an electric shock to you or damage to the phone.

**Section 12**

- Do not use or store the phone in dusty, dirty areas, as its moving parts may be damaged.
- Do not store the phone in hot areas. High temperatures can shorten the life of electronic devices, damage batteries, and warp or melt certain plastics.
- Do not store the phone in cold areas. When the phone warms up to its normal operating temperature, moisture can form inside the phone, which may damage the phone's electronic circuit boards.
- Do not drop, knock or shake the phone. Rough handling can break internal circuit boards.
- Do not use harsh chemicals, cleaning solvents or strong detergents to clean the phone. Wipe it with a soft cloth slightly dampened in a mild soap-and-water solution.
- Do not paint the phone. Paint can clog the device's moving parts and prevent proper operation.
- Do not put the phone in or on heating devices, such as a microwave oven, a stove or a radiator. The phone may explode when overheated.
- If your phone has an external antenna, use only the supplied or an approved replacement antenna. Unauthorized antennas or modified accessories may damage the phone and violate regulations governing radio devices.
- If the phone, battery, charger or any accessory is not working properly, take it to your nearest qualified service facility. The personnel there will assist you, and if necessary, arrange for service.

Section 13

Standard Limited Warranty

What is Covered and For How Long? SAMSUNG

TELECOMMUNICATIONS AMERICA, L.P. ("SAMSUNG") warrants to the original purchaser ("Purchaser") that SAMSUNG's Phones and accessories ("Products") are free from defects in material and workmanship under normal use and service for the period commencing upon the date of purchase and continuing for the following specified period of time after that date:

Section 13

Phone	1 Year
Batteries	1 Year
Leather Case/ Pouch	90 Days
Holster	90 Days
Other Phone Accessories	1 Year

What is Not Covered? This Limited Warranty is conditioned upon proper use of Product by Purchaser. This Limited Warranty does not cover: (a) defects or damage resulting from accident, misuse, abuse, neglect, unusual physical, electrical or electromechanical stress, or modification of any part of Product, including antenna, or cosmetic damage; (b) equipment that has the serial number removed or made illegible; (c) any plastic surfaces or other externally exposed parts that are scratched or damaged due to normal use; (d) malfunctions resulting from the use of Product in conjunction with accessories, products, or

Standard Limited Warranty

ancillary/peripheral equipment not furnished or approved by SAMSUNG; (e) defects or damage from improper testing, operation, maintenance, installation, or adjustment; (f) installation, maintenance, and service of Product, or (g) Product used or purchased outside the United States or Canada. This Limited Warranty covers batteries only if battery capacity falls below 80% of rated capacity or the battery leaks, and this Limited Warranty does not cover any battery if (i) the battery has been charged by a battery charger not specified or approved by SAMSUNG for charging the battery, (ii) any of the seals on the battery are broken or show evidence of tampering, or (iii) the battery has been used in equipment other than the SAMSUNG phone for which it is specified.

What are SAMSUNG's Obligations? During the applicable warranty period, SAMSUNG will repair or replace, at SAMSUNG's sole option, without charge to Purchaser, any defective component part of Product. To obtain service under this Limited Warranty, Purchaser must return Product to an authorized phone service facility in an adequate container for shipping, accompanied by Purchaser's sales receipt or comparable substitute proof of sale showing the date of purchase, the serial number of Product and the sellers' name and address. To obtain assistance on where to deliver the Product, call Samsung Customer Care at 1-888-987-4357. Upon receipt, SAMSUNG will promptly repair or replace the defective Product. SAMSUNG may, at SAMSUNG's sole option, use rebuilt, reconditioned, or new parts or components when repairing any Product or replace Product with a rebuilt, reconditioned or new Product. Repaired/replaced leather cases, pouches and holsters will be

Section 13

warranted for a period of ninety (90) days. All other repaired/replaced Product will be warranted for a period equal to the remainder of the original Limited Warranty on the original Product or for 90 days, whichever is longer. All replaced parts, components, boards and equipment shall become the property of SAMSUNG. If SAMSUNG determines that any Product is not covered by this Limited Warranty, Purchaser must pay all parts, shipping, and labor charges for the repair or return of such Product.

WHAT ARE THE LIMITS ON SAMSUNG'S WARRANTY/LIABILITY?
EXCEPT AS SET FORTH IN THE EXPRESS WARRANTY CONTAINED HEREIN, PURCHASER TAKES THE PRODUCT "AS IS," AND SAMSUNG MAKES NO WARRANTY OR REPRESENTATION AND THERE ARE NO CONDITIONS, EXPRESS OR IMPLIED, STATUTORY OR OTHERWISE, OF ANY KIND WHATSOEVER WITH RESPECT TO THE PRODUCT, INCLUDING BUT NOT LIMITED TO:

- THE MERCHANTABILITY OF THE PRODUCT OR ITS FITNESS FOR ANY PARTICULAR PURPOSE OR USE;
- WARRANTIES OF TITLE OR NON-INFRINGEMENT;
- DESIGN, CONDITION, QUALITY, OR PERFORMANCE OF THE PRODUCT;
- THE WORKMANSHIP OF THE PRODUCT OR THE COMPONENTS CONTAINED THEREIN; OR
- COMPLIANCE OF THE PRODUCT WITH THE REQUIREMENTS OF ANY LAW, RULE, SPECIFICATION OR CONTRACT PERTAINING THERETO.

NOTHING CONTAINED IN THE INSTRUCTION MANUAL SHALL BE CONSTRUED TO CREATE AN
