Getting Started

Caring for your M2100

Overview

MiFi M2100 5G Ultra Wideband is Inseego's 2nd generation 5G mobile hotspot, providing download speeds up to 2.7 Gbps* with remarkably fast 4G LTE fallback for extended coverage. The M2100 supports up to 30 connected devices with enterprise-grade dual-band Wi-Fi, or you can tether directly using the USB Type-C port.

Key Features

- Wi-Fi 6 enables up to 40% faster Wi-Fi speeds, up to 4x increase in data throughput per user even with multiple devices connected, and improved battery efficiency versus Wi-Fi 5.
- WPA3 protocol provides security improvements, more robust authentication, and individualized data encryption, and offers additional capabilities for personal and enterprise networks.
- Large 2.4" touchscreen display allows you to manage connected devices, view data usage, configure settings, and more.
- Easy-to-use Admin Web User Interface provides additional access to manage your M2100 environment, including advanced mobile device management tools such as GPS location, Geofence alerts, device setting configuration, logs, and more.
- Enterprise-grade VPN passthrough and the ability to install a VPN client.
- Removable 3500mAh battery keeps devices connected for up to 24 hours[†], and ultra-fast charging with Qualcomm® Quick Charge™ technology. You can use the M2100 as a battery bank to charge your phone, tablet, and other connected devices.

Description

The Inseego 5G MiFi M2100 package includes:

- 5G MiFi M2100
- Pre-installed 3500 mAh Li-Ion Battery
- Pre-installed 4FF Nano SIM Card
- Qualcomm Quick Charge Charger
- USB Type C to A Cable
- Quick Start Guide

* Theoretical values, speeds achieved by connected devices vary based on network coverage, Wi-Fi connection and device capability.

† Theoretical values, battery life and charge time may vary depending on the number of connected devices and activity.

Side View

Press and hold the Power button for three seconds to turn your M2100 on and off. Press and release the Power button to wake up the display.

Connect to the Quick Charge charger or tether to a device with the USB-C port.

Display View

The 2.4 inch touchscreen displays and allows you to manage Wi-Fi name and password, connected devices, data usage, and more. Swipe through screens and tap the arrows, buttons, and icons to access available menu options.

Status Indicators and Icons

The M2100 uses the following status indicators and display icons.

Display Icon		Description
No Icons		The M2100 is powered off or not receiving power, or the screen is in power-saving mode.
Home		Home
Network Signal Strength		Network Signal Strength Indicator. More bars indicate more signal strength.
Activity Indicator		Data is moving between the mobile network and the M2100.
Roaming		Indicates roaming.
Messages		You have unread messages.
Wi-Fi		The M2100 Wi-Fi network is on.
Connected Devices		Displays number of Wi-Fi devices connected to your M2100.
Wi-Fi Name/Password		Tap to view Wi-Fi network names and passwords.
Multiple Screens		Indicates you can swipe left/right to view more screens.
Battery Charged		Battery is fully charged.
Battery Needs Charge		Battery is critically low and the M2100 will shut down unless the battery is connected to the charger.
Battery AC Charging		The M2100 is connected to the AC charger and charging.
Battery USB Charging		The M2100 is connected via USB and is charging a connected device.
No SIM		No SIM card is detected.
Locked SIM		SIM card is locked. The real-time data usage meter will not display.
SIM Error		SIM card error. Check that your SIM card is properly installed.
USB Tethered		Device is connected to the M2100 via USB.

Getting Started

Important: Before you use your M2100, charge the battery for at least three hours to ensure a full initial charge. When fully charged, the battery has up to 24 hours of life.

Turning On and Off

To turn your M2100 on, press and hold the Power button for three seconds. The Home screen appears.

To turn you M2100 off, press and hold the Power button for three seconds until you see the Power Off screen.

Then select **Shutdown** and tap **OK**.

To wake up the display, press and release the Power button.

System Requirements

Your M2100 can connect to any device with Wi-Fi capability and an Internet browser.

The M2100 must have proper data service to function and is compatible with all major operating systems and the latest versions of browsers.

Finding your Wi-Fi Name and Password

Tap **Wi-Fi Name/Password** on the Home screen. The name and password for your M2100 primary network is displayed. Swipe left to see the credentials for the guest network.

Important: The default Admin password is the same as the primary network's default. To change either password, sign in to the M2100 Admin website.

Connecting Devices to the M2100

Your M2100 has two Wi-Fi networks, primary and guest, and lets you connect up to 30 Wi-Fi capable devices. For added security, share your guest network instead of your primary network. The guest network is off by default. You can turn it on from either the M2100 touchscreen or the Admin website.

To connect devices to your M2100:

1. Turn on the device you want to connect. The M2100 will broadcast its own wireless network and name.
2. On the device, open the list of available Wi-Fi networks. Select the M2100 primary or guest network and enter the password. Once connected to the Internet, the M2100 Home screen displays the connected device.

NOTE: You can view or change M2100 settings on the M2100 touchscreen or by connecting to the Admin Web UI from the primary network at <http://my.mifi> or <http://192.168.1.1>.

Caring for your M2100

This section provides information on charging, battery replacement and tips, replacing and unlocking the SIM card, general care, and restoring your M2100 to factory default settings.

Charging

You can check the battery level and charging status of your M2100 from the Home screen.

Important: Before you use your M2100, charge the battery for at least three hours to ensure a full initial charge. When fully charged, the battery has up to 24 hours of life.

Charging with Quick Charge Charger

To charge the battery with the Quick Charge charger:

1. Connect the USB-C end of the USB cable into the charging port of the M2100.

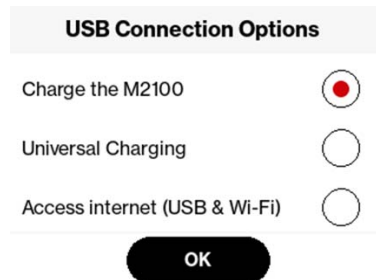

2. Connect the other end of the USB cable into the Quick Charge charger and then plug the charger into an appropriate electrical outlet. When the battery is fully charged, a notice appears on the touchscreen asking you to disconnect the charger.

Charging with USB

You can also charge your M2100 from another device, such as a computer, with USB.

To charge the battery with USB:

1. Connect the USB-C end of the USB cable into the charging port of the M2100.
2. Connect the USB-A end of the USB cable into another device, such as a laptop. The USB Connection Options touchscreen appears.

3. Select **Charge the M2100** and tap **OK**.
4. When the battery is fully charged, a notice appears on the touchscreen asking you to disconnect the charger.

Before using your M2100, read the battery safety information in the Safety Hazards and Proper Battery Use and Disposal sections and the end of this guide.

CAUTION: Use only batteries and chargers that have been approved by Inseego for optimal performance and safe operation of your M2100.

Replacing the Battery

CAUTION: Whenever you remove or insert the battery, ensure your M2100 is not connected to any device or power source. Never use tools, knives, keys, pens or any type of object to force the door open or to remove the battery. Using any of these types of objects could result in puncturing the battery.

To remove and replace the battery:

1. Insert a fingernail at the edge of the battery cover and lift and remove the battery cover. Set the cover aside.

2. Insert your finger into the battery removal divot and lift the battery out of the battery compartment.

3. Align the gold contacts on the new battery with the gold contacts on the M2100 and gently slide the battery into place.
4. Replace the cover by setting it on the M2100 where the notches align, then press on the cover until it clicks into place and is flat across the entire bottom surface.

Battery Tips

WARNING! Always use only approved batteries and chargers with your M2100. The warranty does not cover damage caused by non-approved batteries and/or chargers.

- Do not use sharp objects or use excessive force to remove the battery or to access the battery well, this may damage the M2100 and the battery.
- The battery discharges more rapidly as additional devices access your M2100.
- Battery life depends on the network, signal strength, temperature, features, and accessories you use.
- New batteries or batteries that have been stored for a long time may take more time to charge.
- When storing your battery, keep it uncharged in a cool, dark, dry place.
- When charging your battery, keep it near room temperature.
- Never expose batteries to temperatures below -20°C (4°F) or above 60°C (140°F).
- Never leave the M2100 in an unattended vehicle where it can get too hot or too cold.
- Some batteries perform best after several full charge/discharge cycles.
- It is normal for batteries to gradually wear down and require longer charging times. If you notice a change in your battery life, it is probably time to purchase a new battery.

Replacing the SIM Card

Your SIM card is a small rectangular plastic card that stores your phone number and important information about your wireless service. Your M2100 comes with a pre-installed SIM card.

To remove the SIM card:

1. Insert a fingernail at the edge of the battery cover and lift and remove the battery cover. Set the cover aside.

2. Remove the battery from the battery well.

3. Carefully push down and slide the SIM card backwards to remove from the SIM card slot.

NOTE: Should your SIM card be lost or damaged, contact your network operator.

To place a new SIM card:

1. If necessary, remove the SIM card from the outer card, being careful not to touch the gold colored contacts.
2. Hold the SIM card with the gold-colored contact points facing down.
3. Push down and insert the SIM card into the slot. The SIM card MUST remain in the SIM card slot when in use.

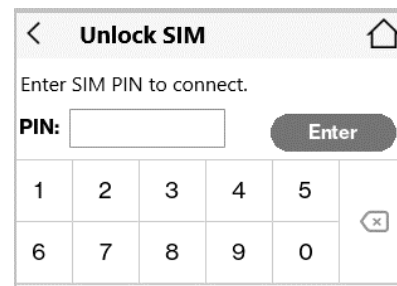

CAUTION: Do not bend or scratch your SIM card. Avoid exposing your SIM card to static electricity, water, or dirt.

Unlocking the SIM Card

You can create a PIN code to lock your M2100 SIM card on the Admin Web UI (Settings > Advanced Settings > SIM). When the SIM is locked, your M2100 will not have access to the Internet. A display appears in the InfoPanel of the Home screen.

Tap the message to unlock the SIM card.
Or you can tap Unlock SIM from the Help menu.

Enter the PIN and tap Enter.

CAUTION: If you run out of PIN attempts, your SIM is PUK (personal unblocking key) locked and you must contact your network operator for the PUK code. You must enter the PUK code in the Admin website. If you enter the wrong PUK code, your SIM card will be permanently locked.

Resetting the M2100

You can reset your M2100 to factory settings using the RESET button on the M2100, from the M2100 touchscreen, or from the Admin Web UI.

CAUTION: Resetting returns your M2100 to factory settings, including resetting the Wi-Fi name and password. This disconnects all devices.

Resetting with the RESET button

To reset using the RESET button on the M2100:

1. Insert a fingernail at the edge of the battery cover and lift and remove the battery cover. Set the cover aside.

The master RESET button is in a small hole located on the bottom of the M2100, underneath the battery cover.

2. Place one end of an unfolded paper clip into the **RESET** button hole and press until the screen displays **M2100 Resetting** (about five to six seconds). Your M2100 restarts with factory settings.

NOTE: This option may be disallowed from the Admin Web UI (Settings > Preferences > Device Preferences).

Resetting from the M2100 touchscreen

To reset from the M2100 touchscreen, tap **Menu > Settings > Factory Reset**.

NOTE: This option may be disallowed from the Admin Web UI (Settings > Preferences > Device Preferences).

Resetting from the Admin Web UI

To reset the M2100 from the Admin Web UI, select **Settings > Backup and Restore** and select **Restore factory defaults**.

Care Tips

Inseego Wireless recommends the following care guidelines:

- Protect your M2100 from liquids, dust, and excessive temperatures.
- Do not apply adhesive labels to your M2100; they might cause the device to potentially overheat or alter the performance of the antenna.
- Store the M2100 in a safe place when not in use.

Help

Overview

You can manage, monitor, and customize your M2100 settings directly on the M2100 touchscreen, or by using the M2100 Admin Web UI. This chapter explains the features available with the touchscreen.

Home Screen

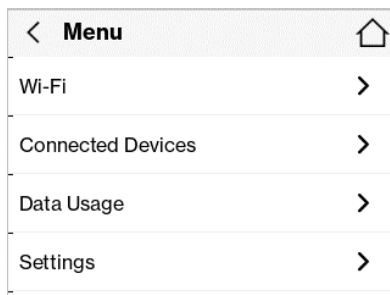

The Home screen lets you see what your M2100 is doing at a glance.

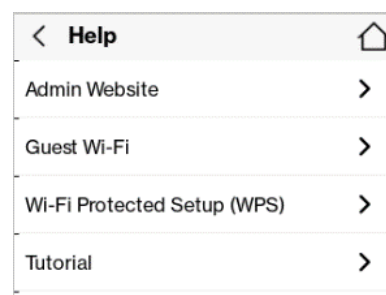

Status Bar: The top of the screen displays status indicators, which may include: network signal strength , network type (for example, **5G**), data traffic activity  , unread system messages , roaming , battery 100% , and USB tethered .

InfoPanel: This panel presents a carousel display of current information on your M2100. Initially, it displays device usage, but may also display other information, such as when Airplane mode is on, or if there is a SIM card error. Swipe left/right through the displays.

AppPanel: Displays whether Wi-Fi is ON or OFF (tap  to access the Wi-Fi menu). Displays how many devices are connected to your M2100 Wi-Fi primary and guest network (tap  to access the Connected Devices menu). Tap  to view the name and password for your primary network.

Menu provides access to all menu options
Swipe up/down to scroll through options

Help provides access to info screens and tutorial

Navigation Tips

- Tap on the arrows > to navigate through topics.
- Use  to return to the Home screen.
- A multiple screen icon  indicates there are multiple screens on that topic.
- Swipe left and right through screens.
- If there is a scroll bar visible on the right, swipe up or down to scroll.

Wi-Fi Settings

The Wi-Fi Settings screen allows you to turn Wi-Fi ON/OFF and select primary and guest network settings.

NOTE: Wi-Fi settings can be locked from the Admin Web UI. If they are locked, you will see an error message and they must be unlocked from the Admin Web UI Wi-Fi Settings page.

To manage Wi-Fi settings, tap the Wi-Fi icon  on the Home screen (or tap **Menu > Wi-Fi Settings**).

Tap 

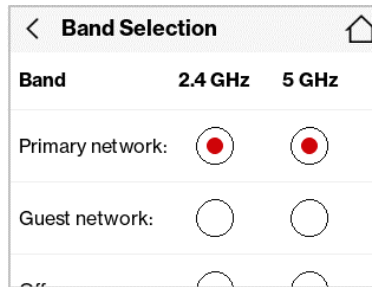

Make selections

Wi-Fi

Use the **Wi-Fi** ON/OFF slider to turn Wi-Fi ON or OFF. This selection affects primary and guest networks.

NOTE: If Wi-Fi is OFF, the only way to connect devices to the M2100 is by tethering with the USB cable.

Band Selection

Use the default values as they appear or adjust them for your environment.

Each network can be accessed over two bands: 2.4 GHz and 5 GHz:

- The 2.4 GHz band is supported by all devices with Wi-Fi and should be used by devices that are a few years old or older. This band passes through walls better and propagates over longer distances, so it may have a longer range.
- The 5 GHz band is best for newer devices. It offers better throughput, reduced interference and faster data speeds, but does not pass through walls as well as the 2.4 GHz band.

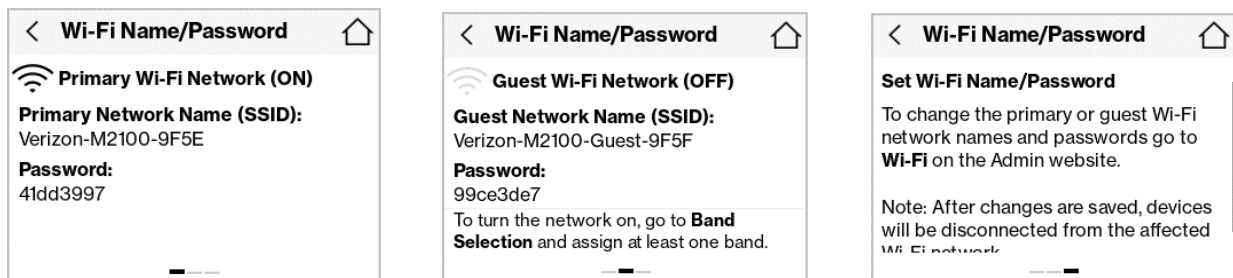

NOTE: You must assign at least one band for the guest network before it can be turned on.

When you make a selection, M2100 notifies you that it is applying changes and returns to the screen when finished.

Tap  **Help me choose** for more information.

Wi-Fi Name/Password

Use the Wi-Fi Name/Password screens to view information on your primary and guest network and to find your passwords. (You can also access these screens by tapping the  icon on the Home screen.)

Swipe left to view the Guest Wi-Fi Network screen and left again to view information.

To turn on your guest network, assign it at least one band in **Wi-Fi Settings > Band Selection**.

NOTE: You can change or hide the network name and password information shown on these screens using the Admin Web UI Wi-Fi pages.

Wi-Fi Protected Setup (WPS)

Enabling Wi-Fi Protected Setup (WPS) allows compatible Wi-Fi devices to easily connect to your M2100 primary or guest network.

NOTE: If WPS is off, you can turn it on using the Admin Web UI Wi-Fi pages.

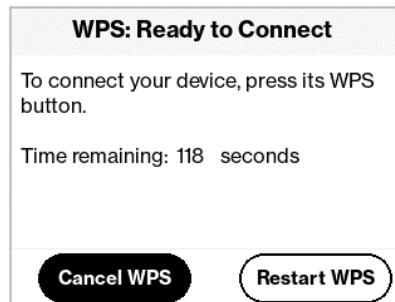

Tap a network

Select a connection option

Use WPS Button

Press the WPS button on the connecting device. A notification appears when successful. If unsuccessful, tap Restart WPS to try again.

Enter PIN

If connecting device has a WPS PIN, enter it and tap Enter.

Connected Devices

The Connected Devices screen lists all devices currently connected to your M2100, along with the network they are using. You can view device details and block or unblock devices from Internet access.

To manage connected devices, tap the connected devices icon  on the Home screen (or tap **Menu** > **Connected Devices**).

Tap 

Tap a device for more details or to block devices
Tap Blocked Devices to unblock devices

Connected Devices (Details and Blocking)

Tap Block to block
Swipe left/right for a different device

Tap Confirm to block the device

Blocked Devices (Unblocking)

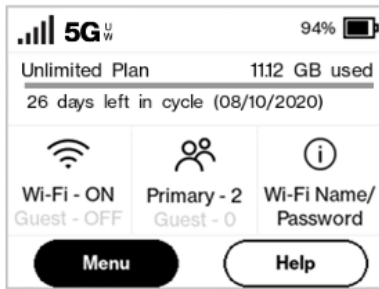

Tap Blocked Devices to unblock

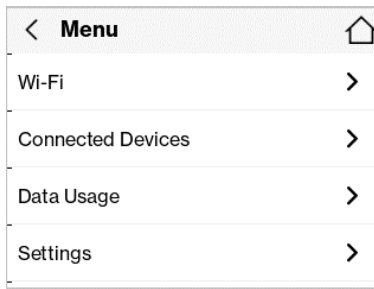

Tap Unblock. The device is removed from Blocked Devices and added to Connected Devices.
Swipe left/right for a different blocked device.

Data Usage

You can view data usage on the Home screen, or tap **Menu > Data Usage**.

Tap Menu

Tap Data Usage

View estimated usage and plan info

NOTE: Data usage estimates may not include roaming. If roaming is on, an informational screen appears. Tap **Continue** for the Data Usage screen.

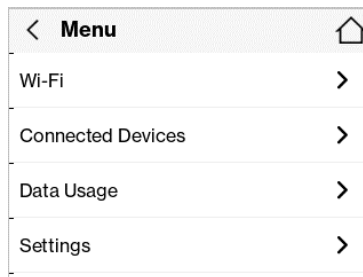

Settings

Use the Settings screen change various M2100 settings or reset your M2100 to the original factory settings.

NOTE: Settings can be locked from the Admin Web UI. If they are locked, you will receive an error message and they must be unlocked from the Admin Web UI (Settings > Preferences > Device Preferences).

Tap Menu

Tap Settings

Set ON/OFF slider or tap a setting

Slide desired alerts ON/OFF

Set touchscreen language

Set touchscreen timeout

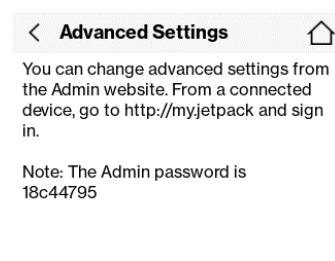

Select a network

Set timer for sleep mode

Tap Factory Reset to restore all settings to the factory default values. Your M2100 will turn off and then on again and all connected devices will be disconnected.

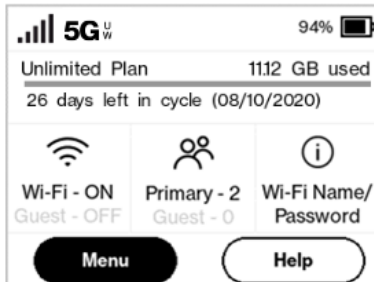

Use the Admin Web UI

NOTE: Factory Reset can be locked from the Admin Web UI. If it is locked, you will receive an error message and it must be unlocked from the Admin Web UI (Settings > Preferences > Device Preferences).

CAUTION: Factory Reset returns your M2100 to factory settings, including resetting the Wi-Fi name and password. This disconnects all devices.

Universal Charging

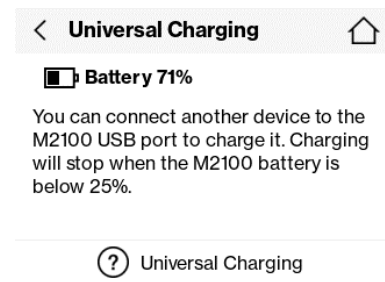

You can use the USB-C port on your M2100 to charge other devices, like a cell phone or tablet. The Universal Charging touchscreen provides battery and charging information.

Tap Menu

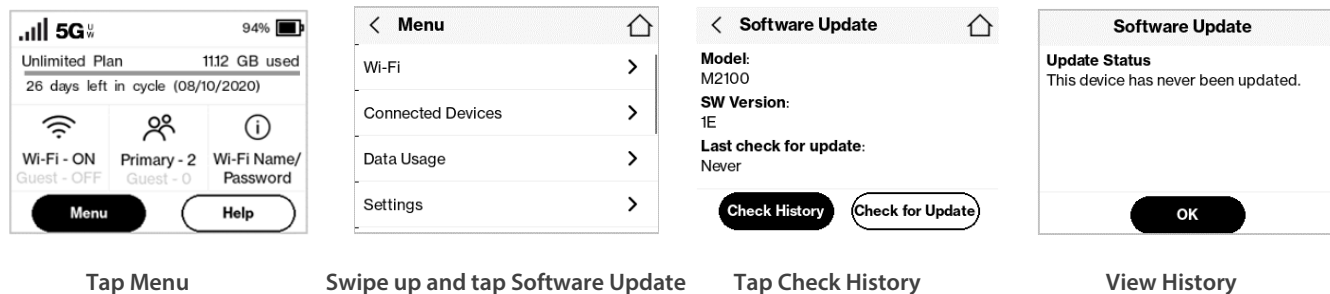

Swipe up and tap Universal Charging

View charging capability
Tap ? for more info

Software Updates

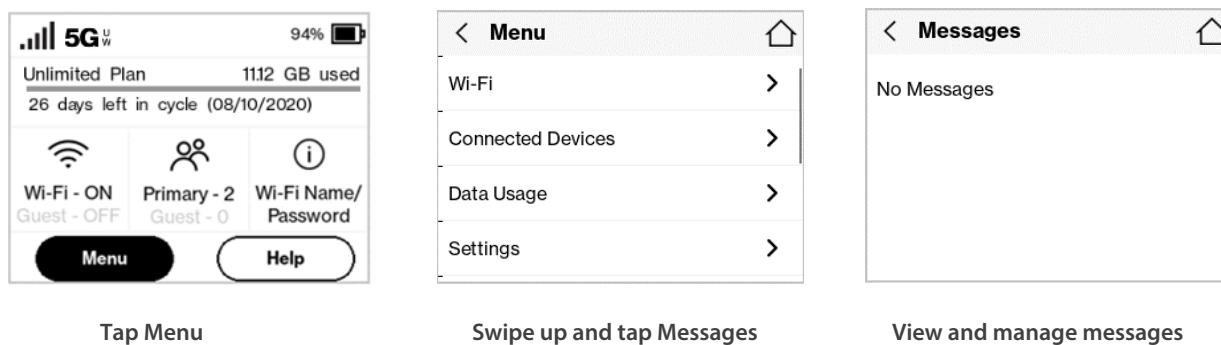

Software updates are delivered to the M2100 automatically over the mobile network. Use the Software Updates screen to view the current software version, the last check for updates, update history, and to check for a new update.

Check for Update: Use this button to check for new software updates. **NOTE:** Software updates are delivered to the M2100 automatically over the network, so this is usually not necessary.

Messages

You can check messages on your M2100 with the Messages screen. There should not be many messages; most will be from your Mobile Network Operator Network (MNO).

About

You can view detailed information about your M2100 with the About screen.

Tap Menu

Swipe up and tap About

View details about your M2100

The About touchscreen provides the following information:

Model: M2100.

SW Version: The version of the software currently installed on your M2100.

Wireless Number: The phone number stored in the SIM card for your M2100.

IMEI: The International Mobile Equipment Identity (IMEI) for this device. This is a 15 digit code used to uniquely identify an individual mobile station. The IMEI does not change when the SIM is changed.

Battery Level: The percentage of charge currently on the battery.

Internet Status: The current Internet status.

Technology: The current cellular data connection, for example, 5G.

Network: The name of the Mobile Network Operator (MNO).

Signal Strength: The strength of the cellular signal, measured in dBm. Higher absolute values indicate a stronger signal, for example: -80 dBm is a stronger signal than -90 dBm.

SNR: Signal to Noise Ratio. A measure of the ratio between signal strength and noise level. SNR values are positive, and higher numbers are better.

Roaming: Indicates whether roaming is on.

APN: The Access Point Name (APN) available from the network, for example: *vzwinternet*.

IP Address: The Internet IP address assigned to your M2100.

Help

When you see  on a screen, tap it for more information on that topic, or use the Help menu. The Help screen provides all the help topics and a tutorial for your M2100.

Tap

Getting Help

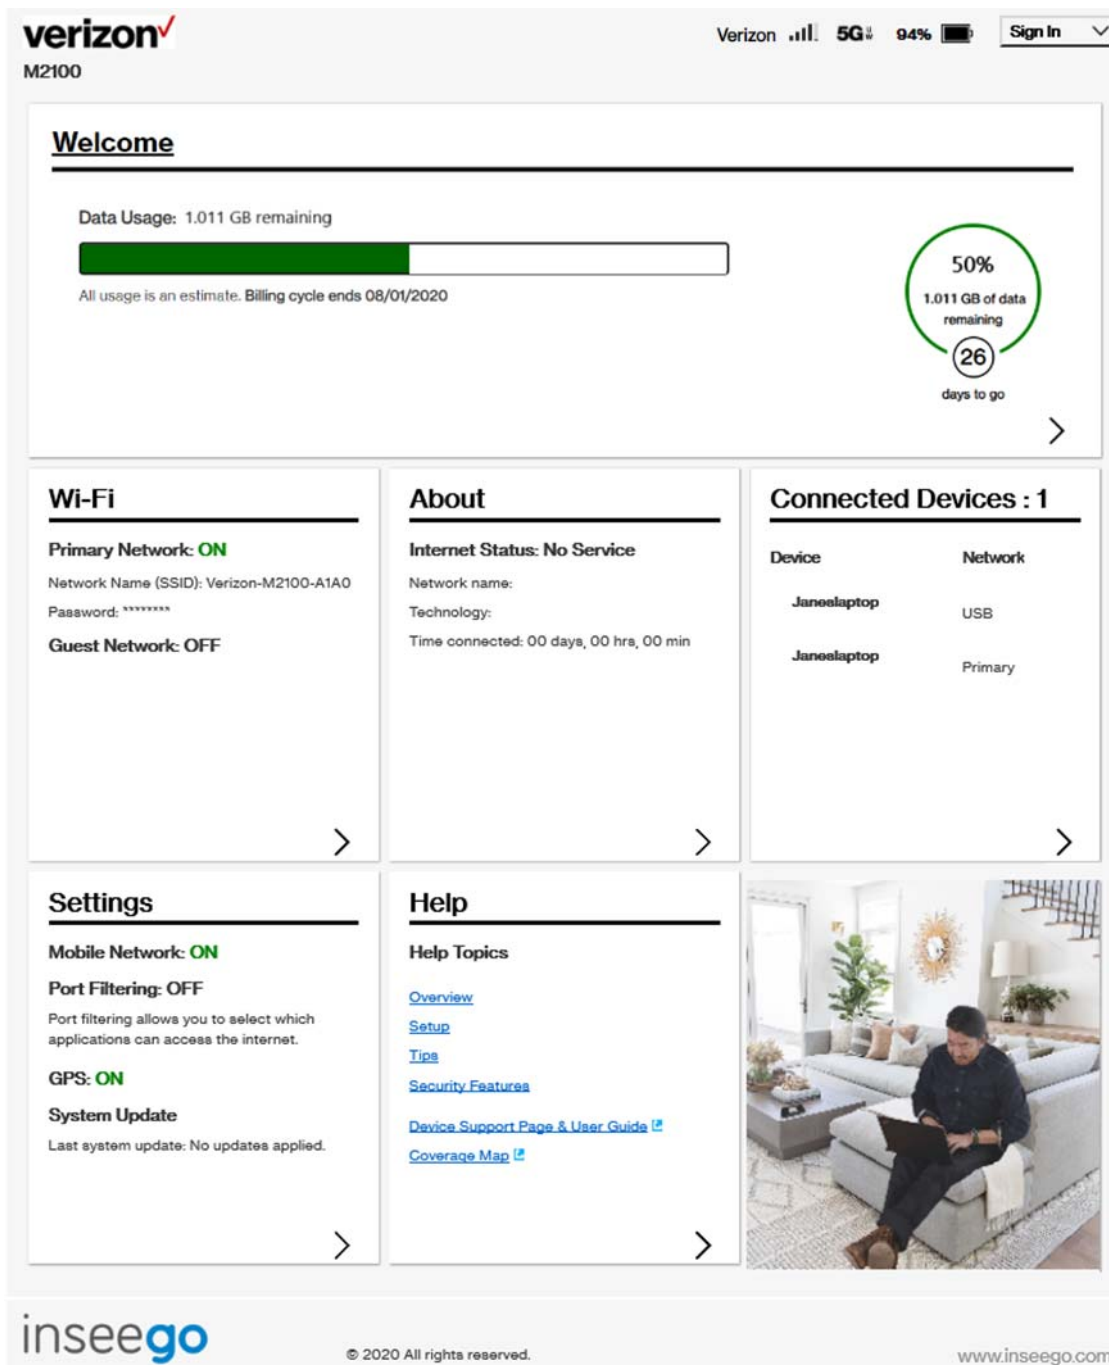

Overview

On a computer or device connected to your M2100, open any web browser and go to <http://my.jetpack/> or <http://192.168.1.1>.

Home Page

The Home page is the local gateway to configuring and managing your M2100. It displays current data usage and Wi-Fi status, lists currently connected devices, and offers links to other pages with option settings and help.

Click  in the bottom-right corner of a panel to access screens with further information and options.

The screenshot shows the Verizon M2100 Home Page interface. At the top, the Verizon logo is on the left, and the status bar shows Verizon 5G, 94% battery, and a Sign In button. Below the status bar, the page is titled "Welcome" and displays "Data Usage: 1.011 GB remaining" with a green progress bar. A circular gauge shows "50% 1.011 GB of data remaining" and "26 days to go". The page is divided into several panels: "Wi-Fi" (Primary Network: ON, Network Name: Verizon-M2100-A1A0, Password: *****, Guest Network: OFF), "About" (Internet Status: No Service, Network name, Technology, Time connected: 00 days, 00 hrs, 00 min), "Connected Devices : 1" (Janeolaptop, USB), "Settings" (Mobile Network: ON, Port Filtering: OFF, GPS: ON, System Update: Last system update: No updates applied.), and "Help" (Help Topics: Overview, Setup, Tips, Security Features, Device Support Page & User Guide, Coverage Map). A photo of a person sitting on a couch using a laptop is shown in the bottom right. The footer includes the inseeogo logo, copyright notice "© 2020 All rights reserved.", and the website "www.inseeogo.com".

Side Menu

Each subscreen in the M2100 Web User Interface includes a menu on the left, which you can use to return to the Home page or jump to other pages. The current page is indicated by a red bar.

Admin Password

The Admin password is what you use to sign into the M2100 Web UI. Initially, it is the same as the default password for your M2100 primary network. Tap **Wi-Fi Name/Password** on the Home touchscreen of your M2100 to view the password.

NOTE: You can set up separate Wi-Fi passwords both primary and guest networks in **Wi-Fi**, but these are different from the Admin password, which is for this Web Interface.

Important: It is critical that you change the Admin password from the default to keep the device and your network secure.

Changing the Admin Password

To change the Admin password:

1. Click the down arrow next to **Sign Out** in the top-right corner of any Web Interface page and select **Admin Settings > Change Device Admin Password**.
2. Enter your current Admin password, then click **Continue**.
3. Enter your current Admin password, then enter a new password and confirm it.
4. Select a security question from the drop-down list and type an answer to question in the **Answer** field. **NOTE:** Answers are case-sensitive.
5. Click **Save Changes**.

The next time you sign in to the M2100 Web Interface, use the new Admin password. If you cannot remember the password, click **I forgot the Admin password**. After you correctly answer the security question you set up, the current password is displayed.

Hiding the Admin Password on the Touchscreen

The Admin password can be viewed on the M2100 touchscreen by tapping **Admin Website** from the Help menu.

To hide the Admin password:

1. Click the down arrow next to **Sign Out** in the top-right corner of any Web Interface page and select **Admin Settings**.
2. Move the **ON/OFF slider** to the right to hide the Admin password on the M2100 touchscreen. The Admin password is no longer visible on the Admin Website touchscreen.
3. Exit the dialog.

Managing Data Usage

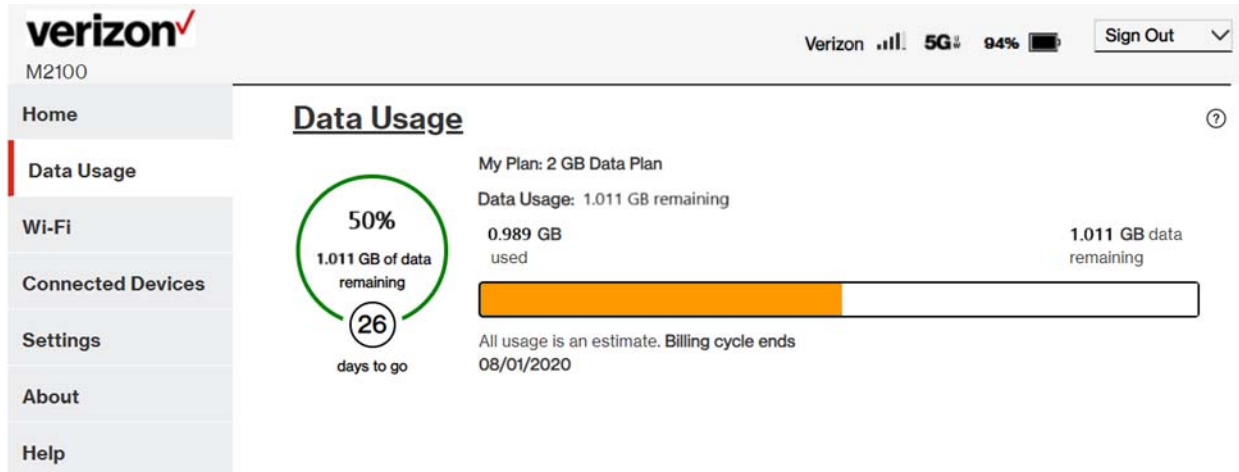

On the Web UI Home page, the Data Usage panel displays graphs of your M2100 data usage for the current billing cycle.

The screenshot shows the Verizon M2100 Web UI Home page. At the top, the Verizon logo and 'M2100' are on the left, and 'Verizon 5G 94%' with a 'Sign In' button is on the right. The main content area is titled 'Welcome' and features a 'Data Usage' section. This section shows 'Data Usage: 1.011 GB remaining' with a green progress bar. Below the bar, it states 'All usage is an estimate. Billing cycle ends 08/01/2020'. To the right of the bar is a circular gauge showing '50%' and '1.011 GB of data remaining', with a smaller circle indicating '26 days to go'. Below the 'Data Usage' section are six panels: 'Wi-Fi', 'About', 'Connected Devices : 1', 'Settings', 'Help', and a photo of a person on a sofa. The 'Wi-Fi' panel shows 'Primary Network: ON' and 'Guest Network: OFF'. The 'About' panel shows 'Internet Status: No Service'. The 'Connected Devices' panel shows two devices: 'Janeelaptop' on 'USB' and 'Janeelaptop' on 'Primary'. The 'Settings' panel shows 'Mobile Network: ON', 'Port Filtering: OFF', 'GPS: ON', and 'System Update'. The 'Help' panel lists 'Help Topics' with links for 'Overview', 'Setup', 'Tips', 'Security Features', 'Device Support Page & User Guide', and 'Coverage Map'. The footer contains the 'inseego' logo, '© 2020 All rights reserved.', and 'www.inseego.com'.

To view the Data Usage page, select > from the Home page Data Usage panel (or select **Data Usage** from the Web UI side menu). The Data Usage page appears.

Data Usage Page

Use the Data Usage page to view details about your M2100 data usage and billing plan.

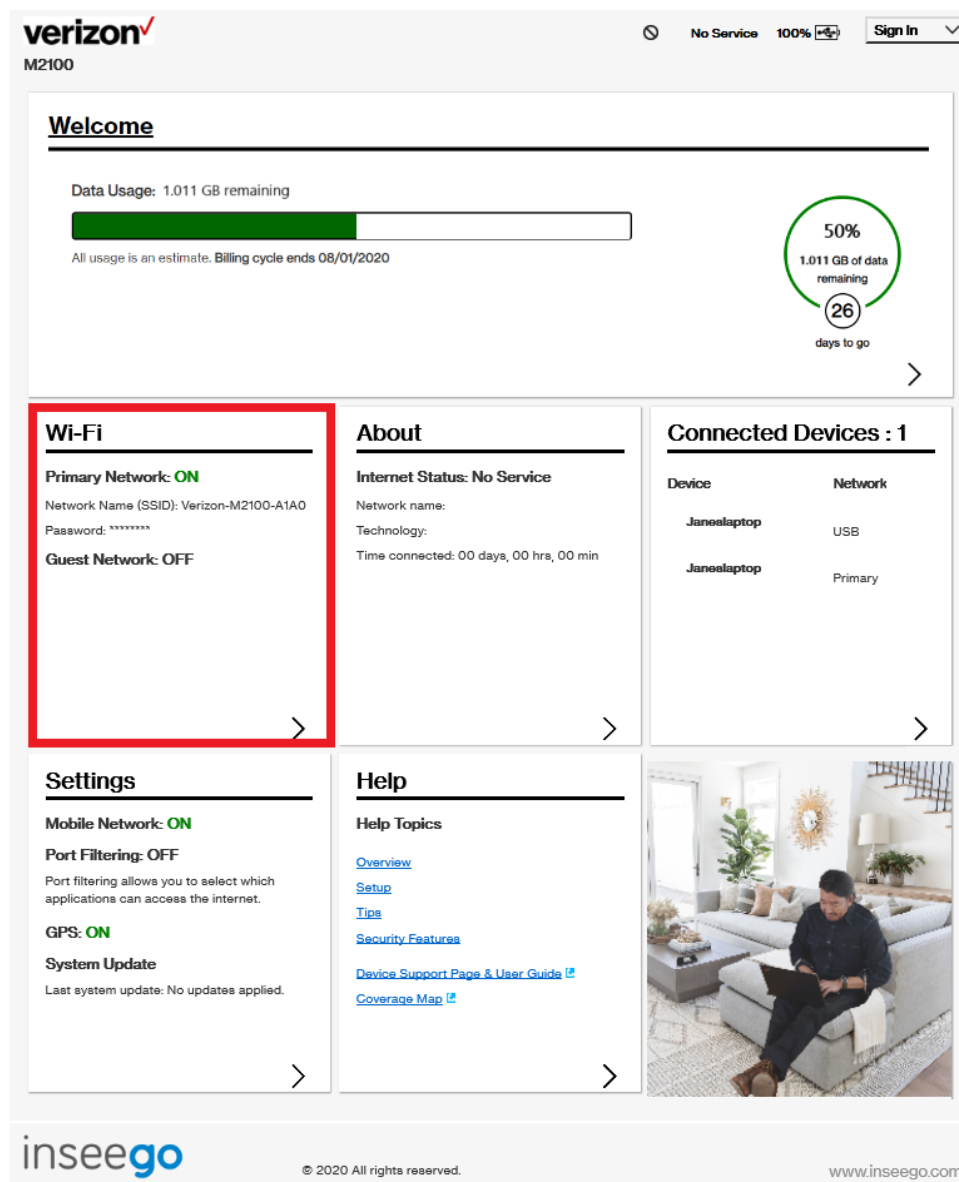

The data usage graph displays vary according to plan, but generally include:

- Estimated percentage of data remaining for the current billing cycle
- Number of days left in the billing cycle
- Data limit on your plan
- Estimated amount of data used in the current billing cycle
- Estimated amount of data remaining for the current billing cycle
- Date the billing cycle ends

Managing Wi-Fi Settings

Your M2100 offers primary and guest networks for accessing the Internet over Wi-Fi. Each network can be accessed over two bands: 2.4 GHz and 5 GHz.

On the Web UI Home page, the Wi-Fi panel shows the current name (SSID) and state of primary and guest networks. Click the eye icon to view the current passwords for each.

To manage settings for these networks, select > from the Home page Wi-Fi panel (or select **Wi-Fi** from the Web UI side menu).

The Wi-Fi page includes three tabs:

- Settings Tab
- Primary Network
- Guest Network

Settings Tab

You can use the default values as they appear on this tab, or can adjust them for your environment.

Wi-Fi

Settings Primary Network Guest Network

These settings apply regardless of which network (primary, guest, or both) is in use. Changes made to these Wi-Fi settings may prevent some Wi-Fi devices from connecting.

Wi-Fi

Allow Wi-Fi devices to connect

Allow Wi-Fi setting changes from the touchscreen

Limit connected devices to: 30 [Change connection limit](#)

Band Selection

Note: Making band selection changes may cause both the primary and guest networks turn off and on again. Devices will be disconnected and you need to sign back into the Admin website.

	2.4 GHz Band	5 GHz Band
Primary network	<input checked="" type="radio"/>	<input checked="" type="radio"/>
Guest network	<input type="radio"/>	<input type="radio"/>
Off	<input type="radio"/>	<input type="radio"/>

2.4 GHz Band Settings

802.11 mode: 802.11bgn/ax

Channel: Automatic

5 GHz Band Settings

802.11 mode: 802.11acn/ax

Bandwidth: 80 MHz

Channel: Automatic

Save Changes

Wi-Fi

Use the **Allow Wi-Fi devices to connect ON/OFF** slider to turn Wi-Fi on or off. This selection affects primary and guest networks. **NOTE:** If Wi-Fi is off, the only way to connect devices to the M2100 is by tethering with the USB cable.

Use the **Allow Wi-Fi setting changes from the touchscreen ON/OFF** slider to allow or disallow setting Wi-Fi options on the M2100 touchscreen. This selection affects primary and guest networks.

Select **Change connection limit** to change the maximum number of devices allowed to connect to your M2100 Wi-Fi. Use the slider to select a number and click **Save Changes**. The maximum number of connected devices is 30.

Band Selection

Each network can be accessed over two bands: 2.4 GHz and 5 GHz:

- The 2.4 GHz band is supported by all devices with Wi-Fi and should be used by devices that are a few years old or older. This band passes through walls better and propagates over longer distances, so it may have a longer range.
- The 5 GHz band is best for newer devices. It offers better throughput, reduced interference and faster data speeds, but does not pass through walls as well as the 2.4 GHz band.

NOTE: The guest network must be assigned at least one band before it can be turned on.

2.4 GHz Band Selection

This section displays the 802.11 Mode in use when the 2.4 GHz band is active and allows you to select a Channel.

NOTE: Leave the Channel set to **Automatic** unless you need to choose a particular channel for your environment.

5 GHz Band Selection

This section displays the 802.11 Mode in use when the 5 GHz band is active and allows you to select a Bandwidth and Channel.

Bandwidth: Leave bandwidth at the default setting unless you experience interference with other Wi-Fi devices. If you experience interference, try lowering the setting to reduce the interference.

NOTE: Leave the **Channel** set to **Automatic** unless you need to choose a particular channel for your environment.

Select **Save Changes** to store new settings.

Primary Network Tab

Use these settings to connect initially to the primary Wi-Fi network or change primary network information. Connected devices must use the Wi-Fi settings shown on this screen.

Wi-Fi

Settings Primary Network Guest Network

Note: For added security, share your guest network instead of your primary network.

Primary network name (SSID): Verizon-M2100-A1A0

Security: WPA3/WPA2 Transition

Password: [masked]

Generate new password

Note: You can create a new password by entering it, or generate a new one. Password must be 8-63 characters. For greater security, use a mixture of digits, upper case, lower case and other symbols.

- Hide primary network name (SSID) on the touchscreen:
- Hide password on touchscreen:
- Broadcast primary network name (SSID):
- WPS:
- Wi-Fi privacy separation:

Save Changes

NOTE: If you change these settings, existing connected devices may lose their connection.

Primary network name (SSID): Enter a primary network name (SSID) to set up or change the primary network name. The name can be up to 32 characters long.

Security: Select an option for Wi-Fi security:

- **WPA3/WPA2 Transition** is the most secure method of Wi-Fi Protected Access and should be used if possible for WPA2 and WPA3 compliant devices.
- **WPA2 Personal PSK (AES)** can be used for WPA2 devices.
- **WPA/WPA2 Mixed Mode** can be used if some of your older devices do not support WPA2.
- **None** allows others to monitor your Wi-Fi traffic and use your data plan to access the Internet.

NOTE: Avoid using this option.

Password: Enter a Wi-Fi password, **or** you can use the Generate new password button.

Important: It is critical that you change the password from the default and use a different password from your Admin password to keep the device and your network secure.

Generate new password: This button inserts a strong random password in the Password field.

You can click the eye icon to view the password.

Hide primary network name (SSID) on the touchscreen: Check this box to hide the Wi-Fi primary network name on the M2100 touchscreen. If unchecked, the primary network name is visible on the touchscreen.

Hide password on touchscreen: Check this box to hide the Wi-Fi primary network password on the M2100 touchscreen. If unchecked, the primary network password is visible on the touchscreen.

Broadcast primary network name (SSID): Check this box to display the Wi-Fi primary network in the list of available Wi-Fi networks on your connected devices. If unchecked, this network is not visible to connected devices.

WPS: Check this box to use Wi-Fi Protected Setup (WPS) for the primary network. WPS allows compatible devices to connect to a Wi-Fi network without having to manually enter the password.

Wi-Fi privacy separation: Check this box to keep each connected device on this network isolated from all other connected devices. This provides additional security if some connected devices are unknown or not completely trusted. **NOTE:** For normal operation, this should be unchecked.

Select **Save Changes**.

Guest Network Tab

The Wi-Fi guest network allows you to segregate traffic to a separate network rather than share access to your Wi-Fi primary network. Use settings on this tab to set up or change Wi-Fi guest network information. Connected devices must use the Wi-Fi settings shown on this screen to connect to the guest M2100 Wi-Fi network.

Connected Devices

This table lists all devices connected to the M2100:

Device: An icon indicates the connection type (Wi-Fi or USB) for each device. (You can hover over the icon to read the type of connection.) The name of the connected device is usually the hostname set on the connected device. In rare cases, the hostname may be unavailable.

Network: Indicates whether the device is connected to the primary or guest network.

Block: Select this box to disconnect a device and prevent it from reconnecting. Select **Save Changes**. The device is removed from the **Connected** list and appears in the **Blocked** list below.

NOTE: This option is available for each device connected through Wi-Fi, but is not available for your own device or devices connected via USB.

To view details on a device or change the name of the device as it appears in this Web UI, click the **down arrow icon** on the right to expand the device row. The following information appears:

- **Name:** To change how the device name appears in this Web UI, enter a different name. **NOTE:** This only changes the device name in the M2100 Web UI.
- **IPv4:** The IP address of the connected device.
- **MAC Address:** The MAC Address (unique network identifier for this connected device).

- **Link Local:** The Link-Local IPv6 address if the connected device supports IPv6.

Click the **up arrow icon**  to collapse the row.

Select **Change connection limit** to change the maximum number of devices allowed to connect to your M2100 Wi-Fi. Use the slider to select a number and click **Save Changes**. The maximum number of connected devices is 30.

Blocked

This section lists all devices blocked from connecting to the M2100.

NOTE: Since blocked devices are not currently connected, they do not have an IP address. Instead, they are identified by their name and MAC address.

To unblock a blocked device, click the **Unblock** button and select **Save Changes**. The device is removed from the **Blocked** list and appears in the **Connected Devices** list above.

Managing Settings

On the Web UI Home page, the Settings panel shows the current Mobile Network, Port Filtering, and GPS settings (ON/OFF), and the date and time of the last system update.

The screenshot displays the Verizon M2100 Web UI Home page. At the top, the Verizon logo and 'M2100' are visible on the left, and 'Verizon 5G 94%' and 'Sign In' are on the right. The main content area is divided into several panels:

- Welcome:** Shows data usage: 1.011 GB remaining. A progress bar indicates 50% usage. A circular gauge shows '50% 1.011 GB of data remaining' and '26 days to go'.
- Wi-Fi:** Primary Network: ON. Network Name (SSID): Verizon-M2100-A1A0. Password: *****. Guest Network: OFF.
- About:** Internet Status: No Service. Network name: Technology: Time connected: 00 days, 00 hrs, 00 min.
- Connected Devices : 1:** A table with columns 'Device' and 'Network'. It lists 'Janeelaptop' connected via 'USB' and 'Primary'.
- Settings (highlighted with a red border):** Mobile Network: ON. Port Filtering: OFF. GPS: ON. System Update: Last system update: No updates applied.
- Help:** Help Topics: Overview, Setup, Tips, Security Features, Device Support Page & User Guide, Coverage Map.

At the bottom, the 'inseego' logo is on the left, '© 2020 All rights reserved.' is in the center, and 'www.inseego.com' is on the right.

To change system settings, select > from the Home page Settings panel (or select **Settings** from the Web UI side menu).

The Settings page includes five tabs:

- Preferences Tab
- Software Update Tab
- Backup and Restore Tab
- GPS
- Advanced Tab

Preferences Tab

This tab allows you to configure options for the M2100 touchscreen, notification settings, and Web UI display settings.

The Preference tab includes three sub tabs:

- Device Preferences
- Notifications
- User Preferences

Device Preferences Sub Tab

Use this page to set options for the M2100 touchscreen.

The screenshot shows the Verizon M2100 Settings application. At the top, the Verizon logo is on the left, and the status bar on the right shows 'Verizon', signal strength, '5G', and '94%' battery. Below the logo, a navigation menu lists 'Home', 'Data Usage', 'Wi-Fi', 'Connected Devices', 'Settings' (highlighted), 'About', and 'Help'. The main content area is titled 'Settings' and has a sub-tab bar with 'Preferences' (selected), 'Software Update', 'Backup and Restore', 'GPS', and 'Advanced'. Under 'Preferences', there are three sub-tabs: 'Device Preferences' (selected), 'Notifications', and 'User Preferences'. The 'Device Preferences' section includes five settings, each with an information icon (i) and a drop-down menu: 'USB mode when connected to a computer:' set to 'USB charging'; 'Prompt on USB connection:' with a checked checkbox; 'Turn off screen:' set to 'After 30 seconds'; 'Sleep:' set to 'After 5 minutes'; and 'Shutdown:' set to 'Never'. Below this is the 'Universal Charging' section, which includes a description, a setting for 'Stop Charging when Jetpack's battery is at:' set to '25%', and a 'Current Status:' of 'Available'. At the bottom of this section are two toggle switches: 'Allow settings changes from the touchscreen:' (turned on) and 'Allow factory reset from the touchscreen:' (turned off). A 'Save Changes' button is located at the bottom right of the settings area.

USB mode when connected to a computer: Use the drop-down list to select the type of connection you want for devices connecting to the M2100 USB-C port: USB charging, Internet access via USB and Wi-Fi, or Internet access via USB only.

Prompt on USB connection: Check this box for a prompt to display on the M2100 screen when a device connects via USB. The prompt allows selection of the USB mode of connection. **NOTE:** A USB mode selection made on the M2100 touchscreen does not change the setting above. The setting

above acts as a default, and the choice on the M2100 touchscreen sets the mode for the current USB session only.

Turn off screen: Use the drop-down list to select how long you want the M2100 to be inactive before the touchscreen turns off.

Sleep: Use the drop-down list to select how long you want the M2100 to be inactive before entering sleep mode.

Shutdown: Use the drop-down list to select how long you want the M2100 to be inactive before shutting down.

Universal Charging

You can charge devices such as your phone or Bluetooth headset from the M2100 by connecting the device's USB cable to the M2100's USB-C port.

Stop charging when Jetpack's battery is at: Use the drop-down list to select a battery percentage for the M2100 at which you want to stop charging other devices in order to reserve M2100 battery power.

Current Status: The current status of universal charging:

Charging – A device is being charged from the M2100 battery.

Available – If a device connects to the M2100 USB-C port, it will be charged.

Not available (low battery) – The M2100 battery is too low to charge a device.

Allow settings changes from the touchscreen: Use the **ON/OFF** slider to allow or disallow configuration of settings on the M2100 touchscreen. **NOTE:** If **ON**, settings can be configured on the M2100 touchscreen, including Factory Reset, which resets all settings to factory default settings and disconnects all connected devices.

Allow factory reset from the touchscreen: Use the **ON/OFF** slider to allow or disallow factory reset from the M2100 RESET button and touchscreen (Settings > Factory Reset). If **ON**, factory reset is allowed from the M2100 RESET button and touchscreen. Factory reset resets all settings to factory default settings and disconnects all connected devices. **NOTE:** If **Allow settings changes from the touchscreen** (above) is OFF, Settings > Factory Reset is not available on the touchscreen, even when this slider is ON.

Notifications Sub Tab

Use this page to set options for notifications on your M2100.

The screenshot shows the Verizon M2100 Settings application. The top bar includes the Verizon logo, the device name 'M2100', and status icons for Verizon, 5G, and 94% battery. A 'Sign Out' button is in the top right. A left sidebar contains menu items: Home, Data Usage, Wi-Fi, Connected Devices, Settings (highlighted), About, and Help. The main content area is titled 'Settings' and has tabs for Preferences (selected), Software Update, Backup and Restore, GPS, and Advanced. Under the 'Notifications' sub-tab, there are three sections: 'Device Preferences', 'Notifications', and 'User Preferences'. The 'Notifications' section contains the following settings:

Setting	Checked
Stealth mode:	<input type="checkbox"/>
Turn off sign-of-life LED:	<input type="checkbox"/>
Indicate alerts with screen:	<input checked="" type="checkbox"/>
Indicate alerts with sound:	<input checked="" type="checkbox"/>

Below this is the 'Play sounds for these alerts:' section with two columns of settings:

Setting	Checked
Startup/Shutdown:	<input checked="" type="checkbox"/>
Low battery:	<input checked="" type="checkbox"/>
Critical low battery:	<input checked="" type="checkbox"/>
Charging device:	<input checked="" type="checkbox"/>
USB mode:	<input type="checkbox"/>
SIM status:	<input type="checkbox"/>
New message:	<input checked="" type="checkbox"/>
Connected device joins:	<input type="checkbox"/>
Software update:	<input type="checkbox"/>
Roaming:	<input checked="" type="checkbox"/>
Wi-Fi off:	<input type="checkbox"/>
Network selection:	<input checked="" type="checkbox"/>
Service notifications:	<input checked="" type="checkbox"/>

A 'Save Changes' button is located at the bottom right of the settings area.

Stealth mode: Check this box to turn off the LED and audio capabilities of your M2100. **NOTE:** If checked, other than the startup process, the M2100 touchscreen turns on only when the Power button is pushed.

Turn off sign-of-life LED: Check this box to turn off the LED status light. When unchecked, the LED blinks slowly as a “sign of life”. This option is grayed out if Stealth mode is on.

Indicate alerts with screen: Check this box to turn on your M2100 touchscreen when an alert message displays. This setting is enabled by default.

Indicate alerts with sound: Check this box to have your M2100 make sounds upon startup, shutdown, and other various events. This setting is enabled by default. This option is grayed out if Stealth mode is on.

Play sounds for these alerts:

Check the boxes for the events you want to trigger an audio alert:

- **Startup/Shutdown**
- **Low battery**
- **Critical low battery**
- **Charging device**
- **USB mode**
- **SIM status**
- **New message**
- **Connected device joins**
- **Software update**
- **Roaming**
- **Wi-Fi off**
- **Network selection**
- **Service notifications**

NOTE: This section is grayed out if the Stealth mode setting above is checked, or Indicate alerts with sound is unchecked.

User Preferences Sub Tab

Use this page to change how dates, time, and numbers are displayed in the M2100 Admin Web UI.

The screenshot shows the Verizon M2100 Admin Web UI. The top navigation bar includes the Verizon logo, the device name 'M2100', and status indicators for Verizon, 5G, and 94% battery. A 'Sign Out' button is in the top right. A left sidebar contains navigation links: Home, Data Usage, Wi-Fi, Connected Devices, Settings (highlighted), About, and Help. The main content area is titled 'Settings' and has a sub-tab 'User Preferences' selected. Under 'User Preferences', there are five settings, each with a drop-down menu: Language (English), Date (mm/dd/yyyy), Time (12 hr), Distance (Feet), and Number format (3,234.00). A 'Save Changes' button is located at the bottom of the settings list.

Language: Select a language for the Admin Web UI.

Date: Select the date format to be used throughout the Web UI (mm/dd/yyyy or dd/mm/yyyy).

Time: Select the time format to be used throughout the Web UI (12 or 24 hour).

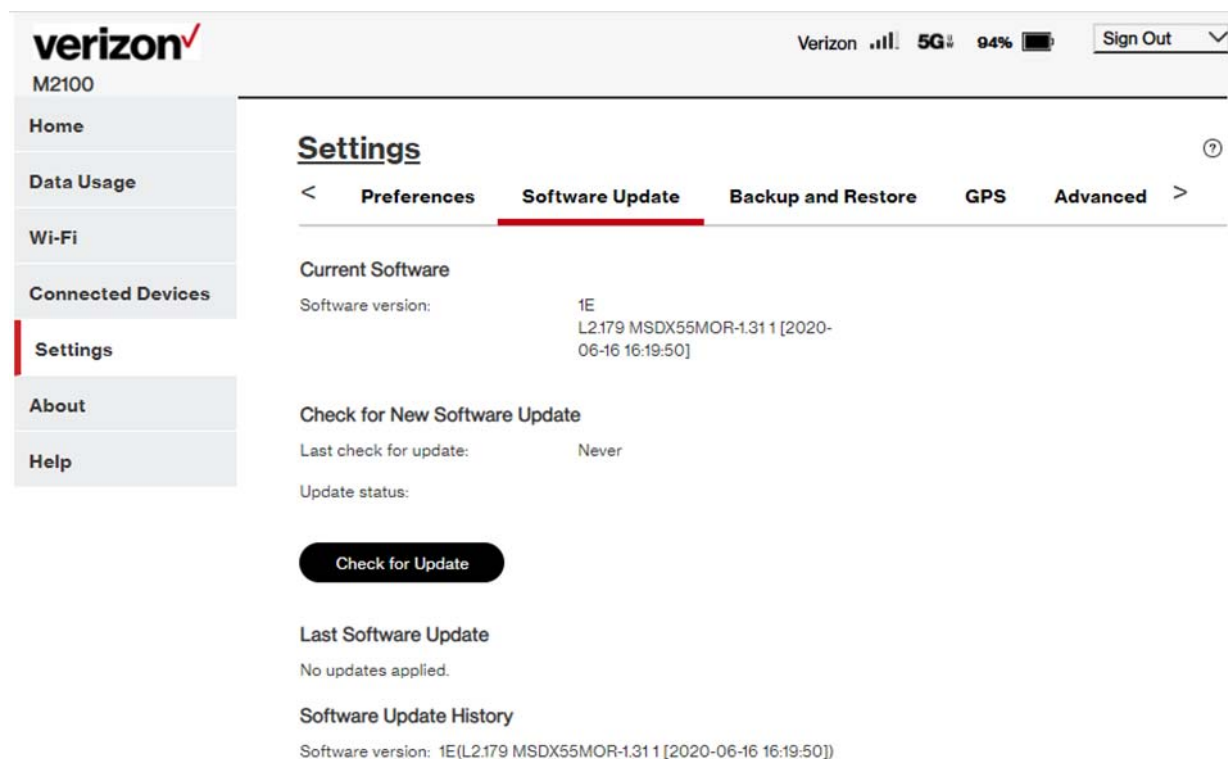

Distance: Select the distance format to be used for the Web UI when marking GPS altitude and accuracy (Feet or Meters).

Number format: Choose the format for decimal numbers displayed in the Web UI (using a period or comma as the decimal point).

Select your display choices from the drop-down menus and click **Save Changes** to update settings.

Software Update Tab

Software updates are delivered to the M2100 automatically over the mobile network. This tab displays your current software version, last system update information, software update history, and allows you to check for new software updates.

Current Software

Software version: The version of the software currently installed on your M2100.

Check for New Software Update

Last check for update: The date and time the M2100 last checked to see if an update was available.

Update status: This area is usually blank. If you check for an update, the result of that check, or the download progress of an update displays.

Check for Update: Click this button to manually check for available software updates. If a new software update is available, it is automatically downloaded.

Last Software Update

This section displays details about the last software update.

Software Update History

This section displays details of the last updates that have been downloaded and installed to this device. If no updates have been installed, this section displays the current software version.

Backup and Restore Tab

Use this tab to back up current M2100 settings to a file on your computer, restore (upload) a previously-saved configuration file, reset the router to factory defaults, or restart or turn off your M2100.

The screenshot shows the Verizon M2100 Settings application. At the top, the Verizon logo is on the left, and the status bar shows 'Verizon', signal strength, '5G', and '94%' battery. A 'Sign Out' button is in the top right. A left sidebar contains menu items: Home, Data Usage, Wi-Fi, Connected Devices, Settings (highlighted), About, and Help. The main content area is titled 'Settings' and has a navigation bar with tabs: Preferences, Software Update, Backup and Restore (selected), GPS, and Advanced. Below the navigation bar, there are three sections: 1. 'Backup': A heading, a note 'Save your M2100 settings to your computer. Please note that the backup file will only work with this M2100.', an 'Admin password:' field, a note 'Note: You'll be locked out if an incorrect password is used too many times.', and a 'Download' button. 2. 'Restore Settings': A heading, a note 'Restore backed up settings from a file on your computer.', an 'Admin password:' field, a note 'Note: You'll be locked out if an incorrect password is used too many times.', a 'Select a file:' field with 'No file selected' and a 'Browse' button, and a 'Restore now' button. 3. 'Restore to Factory Defaults': A heading, a note 'Restore all settings to the factory default values.', and a 'Restore factory defaults' button. At the bottom, there are two options: 'Restart M2100' with a 'Restart' button, and 'Turn Off M2100' with a 'Turn off' button.

Backup

To back up current M2100 settings to a file on your computer, enter your Admin password in the **Admin password** field.

The initial Admin password is the same as the default password for your M2100 primary network. Tap **Wi-Fi Name/Password** on the Home screen of your M2100 to view the password. If you have changed the Admin password and don't remember it, select **Sign Out** in the top-right corner of the Home page, click **I forgot the Admin password**, and answer the displayed security question. The current Admin password will be displayed.

NOTE: If you enter an incorrect password five times in a row, you will be locked out of the Web UI. To unlock it, restart your M2100.

Click the **Download** button. The file is automatically downloaded to your Downloads folder. This configuration file contains all settings for your M2100.

NOTE: The backup file cannot be edited or viewed on the downloaded system or on any other device. This file can only be restored for this model of MiFi.

Restore Settings

CAUTION: Restoring settings (uploading a configuration file) changes ALL of the existing settings to match the configuration file. This may change the current Wi-Fi settings, breaking all existing connections to the M2100 and disconnecting you from the Web UI.

To restore system settings from a backup settings file, enter your Admin password in the **Admin password** field.

In the **Select a file** field, click **Browse** and choose a backup settings file to restore.

NOTE: You can only restore a file that was created for this model of MiFi.

Click the **Restore now** button.

Restore to Factory Defaults

Restore factory defaults: This button resets all settings to their factory default values.

CAUTION: This initiates a restart and may change the current Wi-Fi settings, breaking all existing connections to your M2100 and disconnecting you from the Web UI.

Restart M2100

Restart: This button turns your M2100 off and on again.

Turn off M2100

Restart: This button turns your M2100 off.

GPS Tab

The M2100 incorporates a GPS receiver. The GPS receiver can determine your current location. Use this tab to enable GPS, view current location information, and to enable GPS streaming to devices with the GPS over Wi-Fi feature.

The screenshot shows the Verizon M2100 Settings app interface. At the top, the Verizon logo is on the left, and the status bar shows 'Verizon', signal strength, '5G', and '94%' battery. A 'Sign Out' button is in the top right. A left sidebar contains navigation options: Home, Data Usage, Wi-Fi, Connected Devices, Settings (highlighted), About, and Help. The main content area is titled 'Settings' with a question mark icon. Below this is a horizontal menu with options: Preferences, Software Update, Backup and Restore, GPS (highlighted with a red bar), and Advanced. The 'GPS Settings' section includes a description: 'The GPS receiver can determine your current location. This location can be provided to connected devices.' It features three toggle switches: 'Enable GPS' (ON), 'Turn off GPS when the M2100 restarts' (OFF), and 'Turn on GPS over Wi-Fi' (OFF). Below these is a 'Port Number' input field containing '11010' and a 'Save Changes' button. The 'GPS Driver' section has a description: 'GPS data is provided by the M2100 in the form of a National Marine Electronics Association (NMEA) text stream. This GPS stream can be used by many location-oriented computer programs. You need to install a driver on your computer.' and a 'Download Driver' button. The 'Current Location' section displays a table of location data:

Latitude:	43.88258853	Altitude:	986 ft
Longitude:	-123.09529807	Accuracy:	2429 ft

GPS Settings

Enable GPS: This setting enables or disables the GPS radio on your M2100. When the **ON/OFF** slider is **ON**, the device acquires GPS and makes GPS location data available on this page. A GPS Agreement appears, click **Confirm** to proceed. When **OFF**, no GPS data is available.

Turn off GPS when the M2100 restarts: This setting determines when the GPS receiver will turn off, once it is on. When the **ON/OFF** slider is **ON**, the GPS receiver turns off when the M2100 is shut down. You will need to turn it on again the next time the GPS receiver is needed.

Turn on GPS over Wi-Fi: Allows you to share location information with connected devices. Raw GPS data is provided in the form of a National Marine Electronics Association (NMEA) text stream. You can use third-party applications to utilize or forward the GPS data to a remote server. When the **ON/OFF** slider is **ON**, location information can be shared.

Port Number: The TCP port number used to establish a connection to the M2100 and obtain raw GPS data for the GPS over Wi-Fi feature. Unless there is a good reason to do so, you should not change the port number. Acceptable port values are between 1024 and 65535.

GPS Driver

For the GPS over Wi-Fi feature, if you want to access the GPS data stream from a virtual COM port instead of the TCP port (above), use the **Download Driver** button to download and install a GPS driver for your Windows platform. This driver creates a virtual NMEA port, obtains GPS data from the M2100, and makes this GPS data available to NMEA-aware third-party applications.

Current Location

Latitude: Latitude for the last location fix.

Longitude: Longitude for the last location fix.

Altitude: Altitude for the last location fix.

Accuracy: A measure of the accuracy of the horizontal position obtained by the GPS receiver.

NOTE: You can change the format of measurement (Feet or Meters) in **Settings > Preferences > User Preferences**.

Advanced Tab

Advanced settings are intended only for users with advanced technical knowledge. For information about the Advanced Settings page, go to Chapter 4, Advanced Settings on page 64.

Viewing Info About the M2100

On the Web UI Home page, the About panel shows current Internet status, the name of the network to which the M2100 is connected, technology, and amount of time connected.

The screenshot displays the Verizon M2100 Web UI Home page. At the top, the Verizon logo and status bar (Verizon, 5G, 94% battery, Sign In) are visible. The main content area is divided into several panels:

- Welcome:** Shows data usage (1.011 GB remaining) with a progress bar and a circular gauge indicating 50% remaining (1.011 GB) and 26 days to go. A note states: "All usage is an estimate. Billing cycle ends 08/01/2020".
- Wi-Fi:** Shows Primary Network: ON, Network Name (SSID): Verizon-M2100-A1A0, Password: *****, and Guest Network: OFF.
- About (highlighted with a red border):** Shows Internet Status: No Service, Network name:, Technology:, and Time connected: 00 days, 00 hrs, 00 min.
- Connected Devices : 1:** Shows a table with columns Device and Network:

Device	Network
Janealaptop	USB
Janealaptop	Primary
- Settings:** Shows Mobile Network: ON, Port Filtering: OFF (with a note: "Port filtering allows you to select which applications can access the internet."), GPS: ON, and System Update (Last system update: No updates applied).
- Help:** Lists Help Topics: Overview, Setup, Tips, Security Features, Device Support Page & User Guide, and Coverage Map.

The footer includes the inseeogo logo, copyright notice (© 2020 All rights reserved.), and the website URL (www.inseeogo.com).

To view more detailed information about your M2100 and its use, select > from the Home page About panel (or select **About** from the Web UI side menu).

The About page includes four tabs:

- Internet Status
- Diagnostics
- Device Info
- Logs

Internet Status Tab

Use the Internet Status tab to view general Internet connection and system information.

The screenshot displays the Verizon M2100 user interface. At the top, the Verizon logo and device ID 'M2100' are visible, along with signal strength, 5G network indicator, and 94% battery level. A 'Sign Out' button is in the top right. The left navigation menu includes 'Home', 'Data Usage', 'Wi-Fi', 'Connected Devices', 'Settings', 'About' (highlighted), and 'Help'. The main content area is titled 'About' and features four sub-tabs: 'Internet Status' (selected), 'Diagnostics', 'Device Info', and 'Logs'. Under 'Internet Status', the following information is shown:

Status:	No Service
Network Name:	
Technology:	
Time Connected:	00:00:00:00 (dd:hh:mm:ss)
Received:	0
Transmitted:	0

Below this, there are sections for IPv4 and IPv6 IP addresses, Mask, Gateway, and DNS. A 'View Internet Sessions' button is located at the bottom of the main content area.

Status: The current status of the M2100 Internet connection.

Network Name: The name of the network for the current Internet session established.

Technology: Indicates the current cellular data connection, for example, 5G.

Time Connected: The amount of time that has elapsed since the connection for the current Internet session was established.

Received: The amount of data received for the current Internet session. This counter starts at zero when the connection is established.

Transmitted: The amount of data transmitted for the current Internet session. This counter starts at zero when the connection is established.

IPv4

- **IP Address:** The Internet IP address assigned to the M2100.
- **Mask:** The network mask associated with the IPv4 address.
- **Gateway:** The gateway IP address associated with the IPv4 address.
- **DNS:** The Domain Name Server currently used by the M2100.

IPv6

- **IP Address:** The global IPv6 address for the M2100 (blank if IPv6 is turned off or is not supported by the current network connection or operator).

Click the **View Internet Sessions** button to view session logs. A notice screen appears, click **Ok**. A new browser window opens with the following session log data:

- Date & Time
- Duration
- Received
- Transmitted
- Total Data (sum of Received and Transmitted)
- Roaming (Blank indicates home network)
- IPv4
- IPv6

NOTE: Logs are presented in date order. User cannot change the order and there are no options for session logs.

Diagnostics Tab

This tab displays detailed information used solely for troubleshooting or technical support.

The screenshot shows the Verizon M2100 user interface. At the top, the Verizon logo and 'M2100' are on the left, and 'Verizon 5G 94%' with a battery icon and a 'Sign Out' button are on the right. A navigation menu on the left includes Home, Data Usage, Wi-Fi, Connected Devices, Settings, About (highlighted), and Help. The main content area is titled 'About' and has a sub-menu with 'Internet Status', 'Diagnostics' (highlighted), 'Device Info', and 'Logs'. A note states: 'Note: This detailed information is used only for troubleshooting and technical support.' Below this, there are two sections: 'Modem' and 'Network'. The 'Modem' section lists: Mobile number (MDN): 858.892.8772; IMEI: 9900 1624 0002 954; IMEISV: 9900 1624 0002 9500; FW Version: SDX55MOR-1.24.1 [2020-05-02 11:38:50]; SIM Status: Ready; ICCID: 89148000005527233969; ERI Version: 0; PRL Version: 0. The 'Network' section lists: Status: Not Available; Network Operator: (blank); Signal Strength: (blank); SNR: (blank); Band: (blank); Roaming: (blank).

Modem

Mobile number (MDN): The phone number of your M2100.

IMEI: The International Mobile Equipment Identity (IMEI) for your M2100. This is a 15 digit code used to uniquely identify an individual mobile station. The IMEI does not change when the SIM is changed.

IMEISV: A combination of the IMEI and an approval number for this type of device.

FW Version: The version of the firmware (software) currently installed on your M2100.

SIM Status: Indicates the status of the SIM card. If the SIM card is missing, or there is some form of SIM error, connection to the mobile network is not possible.

ICCID: The unique ID number assigned to the SIM card. This field is blank if there is no SIM card installed, or a SIM error condition exists.

ERI Version: The ERI (Enhanced Roaming Indicator) version currently installed. The ERI table contains information about each roaming network to which the mobile device is allowed to connect and is updated automatically.

PRL Version: The PRL (Preferred Roaming List) version currently installed. The PRL list is used to select a network when multiple networks are available and is updated automatically.

Network

Status: The status of the network: Not available or Available.

Network Operator: The name of the Mobile Network Operator (MNO).

Signal Strength: The strength of the cellular signal, measured in dBm. Higher absolute values indicate a stronger signal, for example: -80 dBm is a stronger signal than -90 dBm.

SNR: Signal to Noise Ratio. A measure of the ratio between signal strength and noise level. SNR values are positive, and higher numbers are better.

Band: The band in use for the current connection.

Roaming: Indicates whether roaming is on.

Device Info Tab

Use this tab to view details about your internal WAN connection.

The screenshot shows the Verizon M2100 settings interface. At the top, the Verizon logo is on the left, and the status bar on the right shows 'Verizon', signal strength, '5G', and '94%' battery. Below the status bar is a 'Sign Out' button. A left-hand navigation menu includes 'Home', 'Data Usage', 'Wi-Fi', 'Connected Devices', 'Settings', 'About' (highlighted with a red bar), and 'Help'. The main content area is titled 'About' and has a sub-menu with 'Internet Status', 'Diagnostics', 'Device Info' (highlighted with a red bar), and 'Logs'. Under 'Device Info', the following information is displayed:

Manufacturer:	Inseego
Model:	M2100
Device Version:	1E
Software Components	
OS Version:	2.179
Modem Firmware Version:	SDX55MOR-1.31.1 [2020-06-16 16:19:50]
Wi-Fi Firmware Version:	1.0.1.2.136.0
Web UI Version:	2.179.0000
Display UI Version:	2.179.0000
PRI Version:	126

Manufacturer: Inseego.

Model: M2100.

Device Version: The version of firmware (software) currently installed.

Software Components

OS Version: The version number for the Operating System and its components.

Modem Firmware Version: The version of firmware (software) currently installed for the modem component.

Wi-Fi Firmware version: the version of firmware (software) currently installed for the Wi-Fi component.

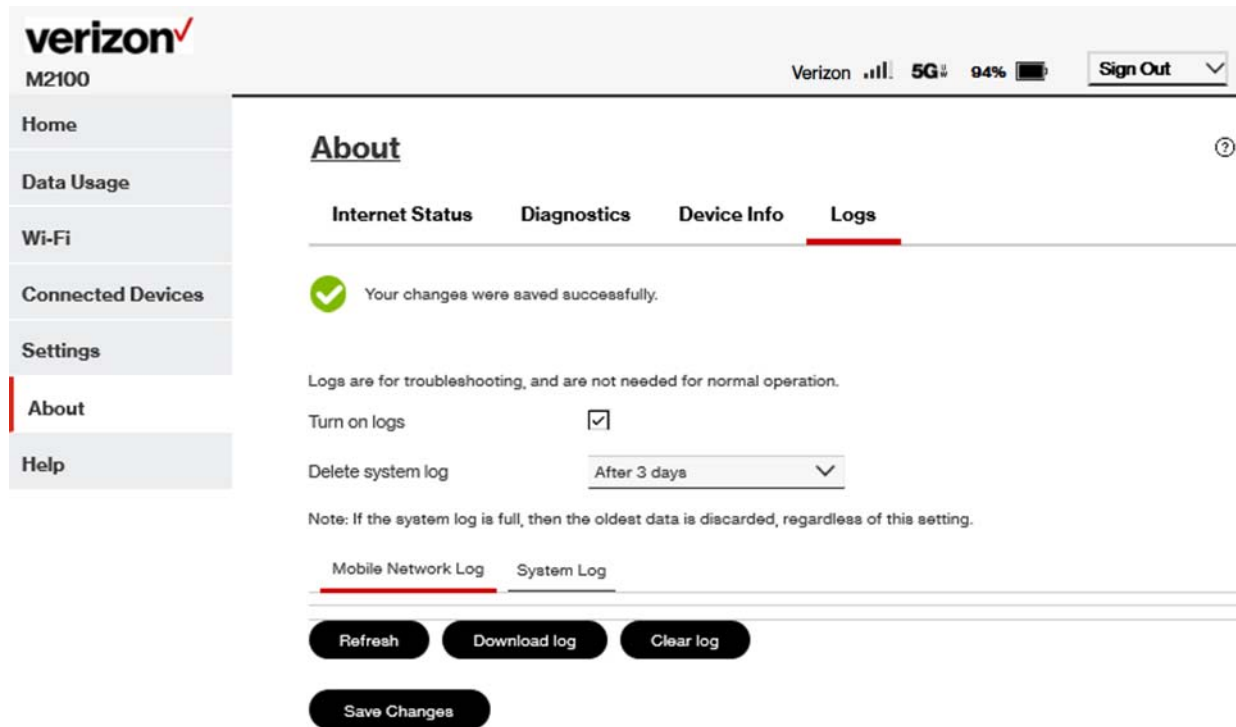

Web UI Version: The version number for the M2100 Admin Web UI.

Display UI Version: The version number for the software controlling the M2100 touchscreen.

PRI Version: The configuration version currently applied to the M2100.

Logs Tab

Use this tab to view log information for troubleshooting.

Turn on logs: Check this box to turn on logs as needed.

Delete system log: Use the drop-down list to select how long system log data is retained. **NOTE:** If the log is full, the oldest data is deleted regardless of this setting.

Click **Save Changes** to enact changes.

If logs are turned on, the following are visible:

Click on **Mobile Network Log** for log data of connections to the mobile network.

Click on **System Log** for log data of events other than mobile data connections that occurred on this device.

Refresh: Updates the displayed log data.

Download log: Allows you to download log data.

Clear log: Deletes all existing log data. This makes new data easier to read.

Click **Save Changes**.

Getting Help

On the Web UI Home page, the Help panel provides links to introductory help and support.

verizon

- [Security Features](#)
- [Device Support Page & User Guide](#)
- [Coverage Map](#)

© 2020 All rights reserved. www.inseego.com

To view more detailed help information, select **>** from the Home page Help panel (or select **Help** from the Web UI side menu).

The Help page includes two tabs:

- Help
- Online Support

Help Tab

This page provides links to help topics for every page of the Admin Web UI and general topics useful for getting started with your M2100.

The screenshot shows the Verizon M2100 Admin Web UI. At the top, the Verizon logo is on the left, and the status bar on the right shows 'Verizon', signal strength, '5G', and '94%' battery. Below the status bar is a 'Sign Out' button. A left-hand navigation menu includes 'Home', 'Data Usage', 'Wi-Fi', 'Connected Devices', 'Settings', 'About', and 'Help' (which is highlighted with a red bar). The main content area is titled 'Help' and has two tabs: 'Help' (selected) and 'Online Support'. Under the 'Help' tab, there are three sections: 'Using Your M2100' with links for 'Overview', 'Setup', 'Tips', and 'Security Features'; 'Admin Website Help' with links for 'Admin Password', 'Messages', 'Data Usage', 'Wi-Fi - Settings', 'Wi-Fi - Primary Network', 'Wi-Fi - Guest Network', 'Connected Devices', 'Device Preferences', 'Notification', 'User Preferences', 'Software Update', 'Backup and Restore', 'GPS', 'About - Internet Status', 'About - Diagnostics', 'About - Device Info', and 'About - Logs'; and 'Advanced' with links for 'Networks', 'Manual Network Selection', 'Manual DNS', 'SIM', 'Firewall', 'MAC Filter', 'LAN', 'Port Filtering', 'Port Forwarding', and 'VPN'.

Online Support Tab

Use the Online Support tab for useful links and support information.

The screenshot shows the Verizon M2100 Admin Web UI with the 'Online Support' tab selected. The top status bar shows 'Verizon', signal strength, '5G', and '94%' battery, with a 'Sign In' button. The left-hand navigation menu is the same as in the previous screenshot, with 'Help' highlighted. The main content area is titled 'Help' and has two tabs: 'Help' and 'Online Support' (selected). Under the 'Online Support' tab, there are three sections: 'Quick Links' with links for 'My Verizon Wireless', 'Coverage Map', 'Data Calculator', and 'Trip Planner'; 'Self-Service Support' with links for 'Attend a Wireless Workshop', 'Community Forums', and 'Device Support Page & User Guide'; and 'Customer Care' with the text 'Verizon Customer Care: 1 800.922.0204'.

4

Advanced Settings

Overview

Using Advanced Settings

Overview

The Advanced Settings pages on the M2100 Admin website are intended for users with technical expertise in the area of telecommunication and networking.

WARNING! Changing the Advanced settings may be harmful to the stability, performance, and security of the M2100.

Using Advanced Settings

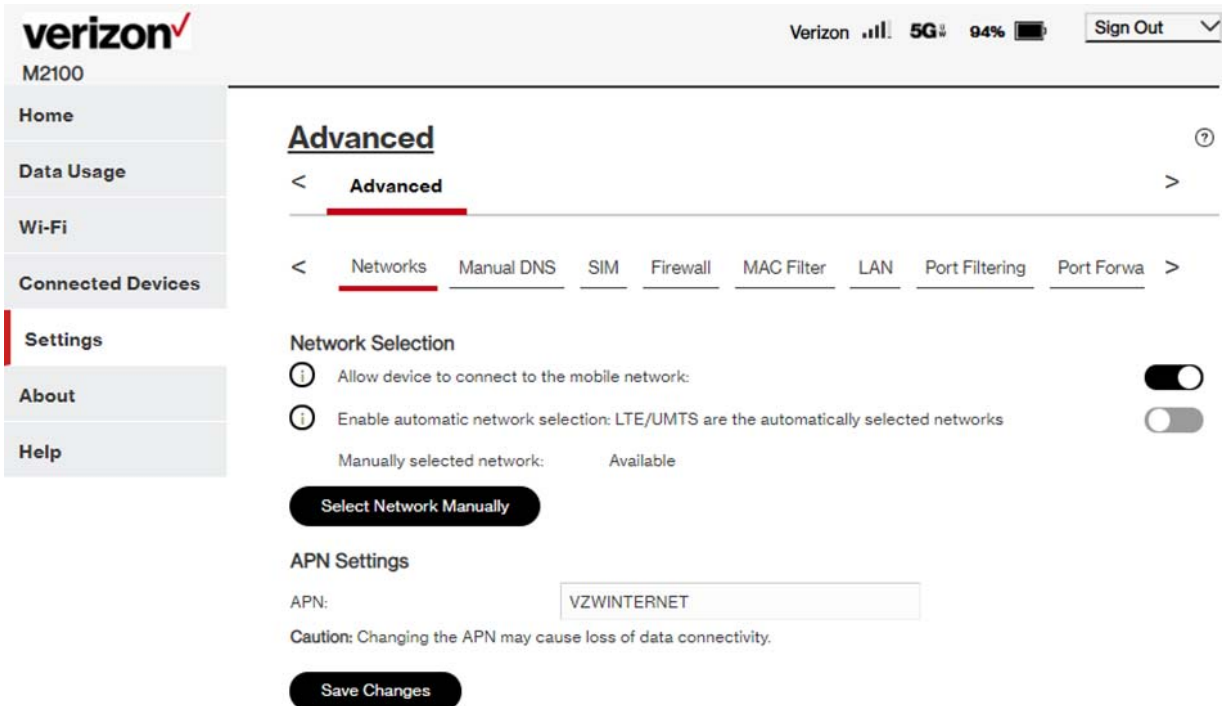

When you select the **Advanced** tab on the Settings page, a warning message appears. If you click **Continue**, the Network tab of the Advanced Settings page appears.

The Advanced Settings page includes nine tabs:

- Networks
- Manual DNS
- SIM
- Firewall
- MAC Filter
- LAN
- Port Filtering
- Port Forwarding
- VPN

Networks Tab

In most configurations, the M2100 is used with a dynamic IP and SIM and the Access Point Name (APN) is available from the network, for example: *vzwinternet*. However, if you are on a private network, you may need to set the APN on this tab for the network to communicate with the M2100, for example: *we01.vzwstatic*.

Network Selection

Allow device to connect to the mobile network: Use the **ON/OFF** slider when necessary to turn off cellular data and prevent access to the mobile network. This prevents connected devices from connecting to the Internet and using your M2100 mobile data plan. For normal operation, this setting must be left on.

Enable automatic network selection: When the **ON/OFF** slider is **ON**, your M2100 automatically selects the best LTE/UMTS available network and you cannot use **Manual Network Selection** below.

Manual Network Selection: You may wish to use this option if multiple networks are available and you have a preference. **NOTE:** This option is available only if **Enable automatic network selection** is off. Click the button to scan for available networks, then choose the preferred network.

APN Settings

Enter the APN for your private network.

CAUTION: Changing the APN may cause a loss of data connectivity and disconnect you from the Web UI.

Click **Save Changes**. The M2100 will reboot for changes to take effect.

Manual DNS Tab

The M2100 automatically selects a Domain Name Server (DNS). This tab allows you to manually assign up to two DNS IP addresses.

The screenshot shows the Verizon M2100 settings interface. At the top, the Verizon logo and status bar (Verizon, 5G, 94% battery, Sign Out) are visible. The left sidebar lists navigation options: Home, Data Usage, Wi-Fi, Connected Devices, Settings (highlighted), About, and Help. The main content area is titled 'Advanced' and contains a sub-tab 'Manual DNS'. Below this, there is a checkbox for 'Turn on manual DNS', two input fields for 'DNS 1 IP address' and 'DNS 2 IP address', and a 'Save Changes' button.

Turn on manual DNS: Check this box to manually select a DNS.

DNS 1 IP address: Enter the IP address for the primary DNS. This address is required to use the Manual DNS feature.

DNS 2 IP address: Enter the IP address for the secondary (backup) DNS. This address is optional and may be left blank if desired.

Click **Save Changes**.

SIM Tab

The SIM card in your M2100 can be locked using a PIN. If the SIM card is locked, you must enter the PIN before connecting to the mobile network. Once entered, the PIN is remembered until the next shutdown. You may also need to provide the existing PIN to change a SIM. The default PIN is available from your service provider.

Use this page to unlock your SIM or enter a SIM PIN.

The screenshot shows the Verizon M2100 settings interface. At the top, the Verizon logo is on the left, and the status bar shows 'Verizon', signal strength, '5G', and '94%' battery. A 'Sign Out' button is in the top right. The left sidebar contains navigation options: Home, Data Usage, Wi-Fi, Connected Devices, Settings (highlighted), About, and Help. The main content area is titled 'Advanced' and has a sub-tab 'SIM' selected. Below the sub-tabs (Networks, Manual DNS, SIM, Firewall, MAC Filter, LAN, Port Filtering, Port Forwarding), there is a text block: 'For additional security, the SIM card can be locked with a PIN code. When locked, the PIN code must be entered before the M2100 will connect to the internet.' Below this, there are two settings: 'SIM PIN Lock' (Off) and 'SIM status' (Ready). A 'Desired Action' dropdown menu is set to 'Turn on PIN Lock'. Below that is a 'Current PIN' input field. A note at the bottom states: 'Note: Entering an incorrect PIN too often will PUK lock your SIM and you will be unable to use the M2100. You will need to contact Verizon customer support to unlock the SIM.' A 'Save Changes' button is at the bottom.

SIM PIN Lock: Indicates whether the PIN lock feature is in use. If On, the PIN lock has been turned on, and the SIM PIN must be entered to connect to the mobile network. If Off, the PIN lock feature is not turned on and the SIM PIN is not required.

SIM status: The current status of the SIM card. Possible states include:

- **Ready** – No SIM PIN is needed.
- **PIN Locked** - SIM PIN must be entered before you can use the mobile network.
- **PUK Locked** - PUK (personal unblocking key) for the SIM must be entered in order to continue. The PUK can be obtained from your service provider.
- **Unlocked** - SIM PIN was needed, but has already been entered.
- **No SIM** - No SIM is detected. Check that the SIM is inserted correctly.
- **SIM Error** - SIM is detected, but is not responding as expected and cannot be used.

Desired Actions: The actions available depend on the SIM status. Possible operations include:

- **PIN Lock** - If the SIM is currently PIN locked, you are prompted to enter the PIN.
NOTE: If an incorrect PIN is entered too many times, the SIM becomes PUK locked. A counter indicates how many incorrect entries will cause PUK lock. Once PUK locked, the PUK must be obtained from your service provider.
- **PUK Lock** - If the SIM is currently PUK locked, the only operation possible is to enter the PUK.
NOTE: If an incorrect PUK is entered too many times, the SIM becomes permanently unusable. You will need to obtain a new SIM. A counter indicates how many entry attempts remain.
- **Turn on PIN Lock** - Sets the SIM so that entry of a PIN is required upon startup to connect to the mobile network. To perform this operation, you must enter the current PIN.
- **Turn off PIN Lock** - Turns off a PIN lock that was previously turned on so that entry of a PIN is no longer required to connect to the mobile network. To perform this operation, you must enter the current PIN.

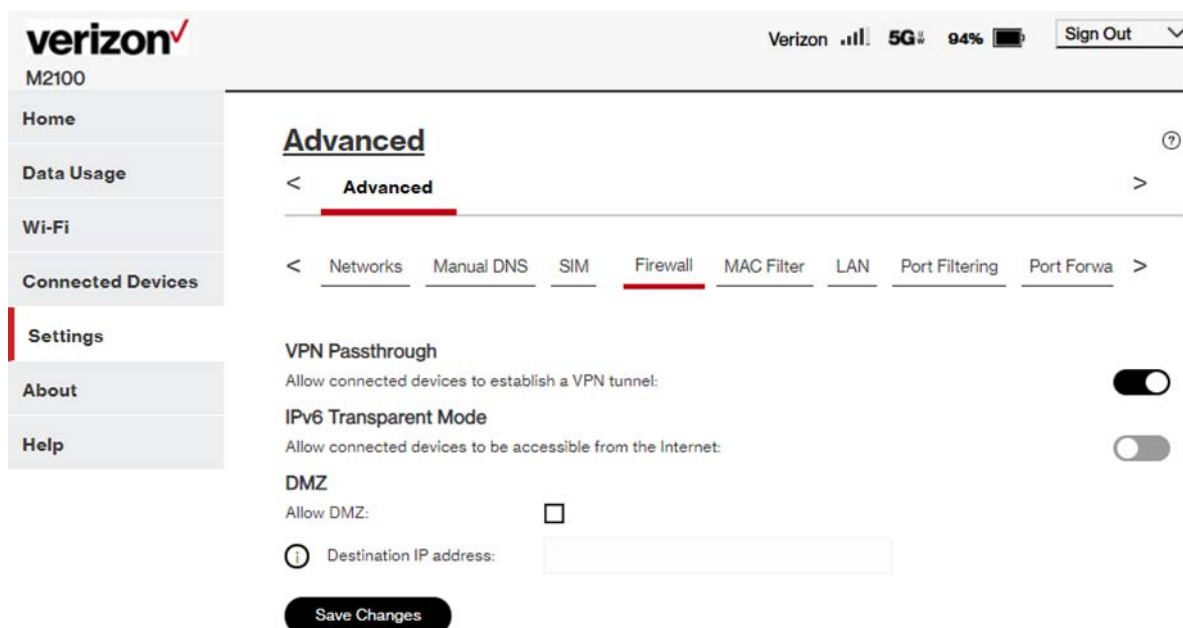

Current PIN: Enter the current PIN.

NOTE: For a Verizon Wireless SIM, the new PIN must be 4, 6 or 8 digits. The default SIM PIN is available from your service provider.

Click **Save Changes**.

Firewall Tab

The M2100 firewall determines which Internet traffic is allowed to pass between the M2100 and connected devices and protects your connected devices from malicious incoming traffic from the Internet. The firewall cannot be turned off. Use the Firewall tab to adjust the general security level of the firewall, designate a specific device to receive all traffic, and set up specific firewall rules.

VPN Passthrough

To use the **VPN Passthrough**, ensure the **ON/OFF** slider is **ON**. This allows you to establish a VPN tunnel while using your M2100.

IPv6 Transparent Mode

To use **IPv6 Transparent Mode**, move the **ON/OFF** slider to **ON**. This allows connected devices to be accessible from the Internet.

DMZ

DMZ allows the connected device specified as the DMZ IP address (Destination IP address) to receive all traffic that would otherwise be blocked by the firewall.

NOTE: Allowing DMZ may assist some troublesome network applications to function properly, but the DMZ device should have its own firewall to protect itself against malicious traffic.

Allow DMZ: Check this box to allow DMZ.

Destination IP address: Enter the IP address of the connected device you wish to become the DMZ device (the DMZ destination). **NOTE:** You can check the IP address of each connected device on the Connected Devices screen.

Click **Save Changes**.

Mac Filter Tab

The MAC filter allows only selected devices to access the M2100 primary Wi-Fi network. By default, MAC filter is turned OFF.

Use this tab to turn the MAC Filter ON and specify device access.

The screenshot shows the Verizon M2100 Advanced settings page. The left sidebar contains navigation options: Home, Data Usage, Wi-Fi, Connected Devices, Settings (highlighted), About, and Help. The main content area is titled 'Advanced' and includes tabs for Preferences, Software Update, Backup and Restore, GPS, and Advanced (selected). Below these are sub-tabs: Networks, Manual DNS, SIM, Firewall, MAC Filter (selected), LAN, Port Filtering, and Port Forwarding. The MAC Filter section explains that it limits access to the Primary Wi-Fi network to chosen devices. It provides instructions: 1. Select the device to filter or add your own. 2. Click 'Save Changes'. 3. Toggle the switch to enable MAC filtering. A note states that the filter does not affect the Guest Wi-Fi network. A toggle switch for 'MAC filter:' is currently turned off. Below is a table with columns: Name, MAC Address, Status, MAC Address Filter, and Delete.

Name	MAC Address	Status	MAC Address Filter	Delete
Janeelaptop	b4:8b:fc:6c:d9:64	Your device	<input type="checkbox"/>	
Janeelaptop	00:15:ff:00:02:95	Offline	<input type="checkbox"/>	<input type="checkbox"/>

At the bottom of the table, there are three buttons: 'Add new device', 'Refresh list', and 'Save Changes'.

NOTE: The MAC filter has no effect on devices connected to the guest Wi-Fi network or devices connected via USB.

MAC Filter

To use the MAC filter, select the device(s) from the device list that you want to be allowed to connect to the primary network and move the **ON/OFF** slider to **ON**. Click **Save Changes**.

CAUTION: Turning on MAC filtering immediately disconnects all devices that are not included in the filter from the primary network.

Device List

This list includes all devices currently connected to the M2100, except those connected via USB.

Add new device: Use this button to add a device to the device list, then enter the device name, MAC address, choose whether to select the MAC Address Filter checkbox, and click **Save Changes**.

To delete a device from the list, select its **Delete** checkbox and click **Save Changes**.

To discard any unsaved changes and refresh the list, click **Refresh list** and **Confirm**.

Notes on Blocking Devices

There are two ways to block devices from connecting to the M2100:

- **Temporarily block a device from connecting to the M2100 via the primary and guest networks and via USB.**

To use this method, go to the **Connected Devices** page and click the **Block** button next to the device.

- **Permanently block a device from connecting to your M2100 primary network only.**

Use the **MAC Filter**.

When blocking devices, the following information applies:

- Devices blocked with **Connected Devices > Block** are blocked from the Wi-Fi network, even if the **MAC Filter** is ON and the device is enabled for the MAC Filter.
- If the **MAC Filter** is ON, and a device is blocked with **Connected Devices > Block**, and is not enabled for the MAC Filter, then it will not be able to connect. Both the MAC Filter and the Block prevent connection.
- If the **MAC Filter** is ON, and a device is enabled for the MAC Filter, then the device will be able to connect. However, it can still be blocked using **Connected Devices > Block** or by disabling the **MAC Filter**.

LAN Tab

This tab provides settings and information about the M2100 local area network (LAN). The LAN consists of the M2100 and all Wi-Fi and USB connected devices.

The screenshot shows the Verizon M2100 Advanced settings page for the LAN tab. The top navigation bar includes the Verizon logo, signal strength, 5G network, 94% battery, and a Sign Out button. The left sidebar contains navigation options: Home, Data Usage, Wi-Fi, Connected Devices, Settings (highlighted), About, and Help. The main content area is titled 'Advanced' and includes a sub-tab 'LAN' which is currently selected. Below the sub-tabs, the IPv4 settings are displayed with the following values: IP Address: 192.168.1.1, Subnet Mask: 255.255.255.0, MAC Address: 28:80:a2:93:a1:a0, Turn on DHCP Server: checked, DHCP Lease Time: 1440 minutes, Start DHCP Address Range at: 192.168.1.2, and DHCP Address Range: 192.168.1.2 - 192.168.1.102. The IPv6 settings show 'Turn on IPv6' checked, with a note that when on, connected devices can make IPv6 connections to the Internet, and a Link-Local Address of fe80::c86b:a1ff:fe2f:a40b. A 'Save Changes' button is located at the bottom of the settings area.

IPv4

IP Address: The IP address for your M2100, as seen from the local network. Normally, you can use the default value.

Subnet Mask: The subnet mask network setting for the M2100. The default value 255.255.255.0 is standard for small (class "C") networks. If you change the LAN IP Address, make sure to use the correct Subnet Mask for the IP address range of the LAN IP address.

MAC Address: (read-only) The Media Access Controller (MAC) Address for the Wi-Fi interface on your M2100. The MAC address is a unique network identifier assigned when a network device is manufactured.

Turn on DHCP Server: This checkbox turns the DHCP Server feature on or off. This should be left checked. The DHCP server allocates an IP address to each connected device. **NOTE:** If the DHCP Server is turned off, each connected device must be assigned a fixed IP address.

DHCP Lease Time: The number of minutes in which connected devices must renew the IP address assigned to them by the DHCP server. Normally, this can be left at the default value, but if you have special requirements, you can change this value.

Start DHCP Address Range at: The start of the IP address range used by the DHCP server. If the IP is set on the client device, use an IP address outside of this DHCP range; if the IP address is set using an IP reservation, it will usually be inside this range. **NOTE:** Only expert users should change this setting.

DHCP Address range: The range of IP addresses that may be allocated to connected devices. If using a fixed IP address on a connected device, you should use an IP address that is outside this range.

IPv6

Turn on IPv6: Check this box if any of your connected devices support IPv6. This enables IPv6 connected devices to make IPv6 connections to the Internet.

Link-Local Address: The Link-Local IPv6 address if the connected device supports IPv6.

Click **Save Changes** to activate and save new settings.

Port Filtering Tab

Port Filtering allows you to block outgoing Internet connections and permit only selected applications to access the Internet. Traffic is identified by port numbers. Some applications are pre-defined. You can define additional applications if you know the details of the traffic used and generated by the applications.

NOTE: You can also view the current Port Filtering setting (ON/OFF) in the Settings panel on the Web UI Home page.

The screenshot shows the Verizon M2100 Web UI interface. At the top, the Verizon logo is on the left, and the status bar on the right shows 'Verizon', signal strength, '5G', and '94%' battery. A 'Sign Out' button is in the top right corner. A left-hand navigation menu includes 'Home', 'Data Usage', 'Wi-Fi', 'Connected Devices', 'Settings' (highlighted with a red bar), 'About', and 'Help'. The main content area is titled 'Advanced' and contains a sub-menu with 'Networks', 'Manual DNS', 'SIM', 'Firewall', 'MAC Filter', 'LAN', 'Port Filtering' (highlighted with a red bar), and 'Port Forwarding'. Below the sub-menu, a message states: 'If Port Filtering is on, only traffic from selected applications can access the internet. Note: DNS is always allowed.' The 'Port Filtering' toggle switch is currently turned off. Under the 'Applications' section, there is a list of checkboxes for 'Email (POP3, IMAP, SMTP)', 'FTP', 'HTTP', 'HTTPS', and 'Telnet', all of which are currently unchecked. At the bottom, there are two buttons: 'Add custom application' and 'Save Changes'.

Port Filtering

To turn on port filtering, move the **ON/OFF** slider to **ON**.

To turn off port filtering, so that any application can connect to the Internet, move the slider to **OFF**.

Applications

Select the applications you want to be able to access the Internet and click **Save Changes**.

The following table provides port numbers and protocol information for each port filtering application listed.

Application Name	Port	TCP*	STCP*	UDP*
Email				
POP3	110	Yes	No	Assigned
POP3S	995	Yes	No	Yes
IMAP	143	Yes	No	Assigned
IMAPS	993	Yes	No	Assigned
SMTP	25	Yes	No	Assigned
SecureSMTP	465	Yes	No	No
FTP control (command)	21	Yes	Yes	Assigned
FTP data transfer	20	Yes	Yes	Assigned
HTTP	80	Yes	Yes	Assigned
HTTPS	443	Yes	Yes	Assigned
Telnet	23	Yes	No	Assigned

* **Yes** indicates the protocol is standardized for the port number.

No indicates the protocol is not standardized for the port number.

Assigned indicates the port number is assigned by IANA (Internet Assigned Numbers Authority) for protocol use, but may not be standardized.

Custom Applications

You can define up to ten custom applications.

Add custom application: Use this button to add a new row to the custom application list.

Custom Applications

You can define your own applications, and then turn them on or off as needed. To define an application, you need to know the outgoing ports used by the application.

On	App Name	Start Port	End Port	Protocol	Delete
<input checked="" type="checkbox"/>	<input type="text" value="Custom App 1"/>	<input type="text"/>	<input type="text"/>	TCP <input type="text"/>	<input type="checkbox"/>

Add custom application

Save Changes

- **On:** Check this box if you want the new application to be able to access the Internet.
- **App Name:** Enter a name for the custom application.
- **Start Port:** Enter the beginning of the range of port numbers used by outgoing traffic for the custom application being added.
- **End Port:** Enter the end of the range of port numbers used by the application.
- **NOTE:** If the application uses a single port instead of a range, type the same value for both the **Start Port** and the **End Port**.
- **Protocol:** Select the protocol used by the port range from the drop-down list (TCP, UDP, or both).
- **Delete:** Check this box to delete a custom application. **NOTE:** Click on the Port Filtering tab again to remove deleted custom applications from view on the screen.

Click **Save Changes** to save any changes made to the custom applications.

Port Forwarding Tab

Port Forwarding allows incoming traffic from the Internet to be forwarded to a particular device connected to your Wi-Fi network. Normally, the built-in firewall blocks incoming traffic from the Internet. Port forwarding allows Internet users to access any server you are running on your computer, such as a Web, FTP, or Email server. For some online games, port forwarding must be used in order for the games to function correctly.

Important: Port forwarding creates a security risk and should not be turned on unless it is required.

Some mobile networks provide you with an IP address on their own network rather than an Internet IP address. In this case, Port Forwarding cannot be used, because Internet users cannot reach your IP address.

The screenshot shows the Verizon M2100 settings app. The top bar includes the Verizon logo, signal strength, 5G network, 94% battery, and a Sign Out button. A left sidebar contains navigation options: Home, Data Usage, Wi-Fi, Connected Devices, Settings (highlighted), About, and Help. The main content area is titled 'Advanced' and has a sub-tab 'Port Forwarding' selected. Below the sub-tab, there is a toggle switch for 'Port forwarding' which is currently turned off. A table lists various applications with checkboxes and input fields for their IP addresses. Below the table, there is a section for 'Custom Applications' with a description and two buttons: 'Add custom application' and 'Save Changes'.

<input type="checkbox"/>	FTP	
<input type="checkbox"/>	HTTP/HTTPS	
<input type="checkbox"/>	NNTP	
<input type="checkbox"/>	POP3/POP3S	
<input type="checkbox"/>	SMTP/Secure SMTP	
<input type="checkbox"/>	SNMP	
<input type="checkbox"/>	Telnet	
<input type="checkbox"/>	TFTP	

Custom Applications
You can define your own applications, and then turn them on or off as needed. To define an application, you need to know the incoming ports used by the application.

Add custom application

Save Changes

Port Forwarding

To turn on port forwarding, move the **ON/OFF** slider to **ON**.

To turn off port forwarding, so that no inbound traffic is forwarded to a LAN client, move the slider to **OFF**.

Check the box next to each Port Forwarding application that you want to allow.

To forward all inbound WAN traffic on a specific port to a single LAN client, enter the IP address of the target device in the application's **IP Address** field.

Click **Save Changes**.

The following table provides port numbers and protocol information for each port forwarding application listed.

Application Name	Port	TCP*	STCP*	UDP*
DNS	53	Yes	No	Yes
FTP control (command)	21	Yes	Yes	Assigned
FTP data transfer	20	Yes	Yes	Assigned
HTTP	80	Yes	Yes	Assigned
HTTPS	443	Yes	Yes	Assigned
NNTP	119	Yes	No	Assigned
POP3	110	Yes	No	Assigned
POP3S	995	Yes	No	Yes
SMTP	25	Yes	No	Assigned
SecureSMTP	465	Yes	No	No
SNMP	161	Assigned	No	Yes
Telnet	23	Yes	No	Assigned
TFTP	69	Assigned	No	Yes

* **Yes** indicates the protocol is standardized for the port number.

No indicates the protocol is not standardized for the port number.

Assigned indicates the port number is assigned by IANA (Internet Assigned Numbers Authority) for protocol use, but may not be standardized.

Custom Applications

You can add up to ten custom applications. Once defined, these applications can be turned on and off the same way as pre-defined applications.

Add Custom Application: Use this button to add a new row to the custom applications list.

Custom Applications

You can define your own applications, and then turn them on or off as needed. To define an application, you need to know the incoming ports used by the application.

On	App Name	IP Address	Port Type	Port Numbers		Protocol	Delete
<input checked="" type="checkbox"/>	Custom App 1	<input type="text"/>	Range ▼	From <input type="text"/>	To <input type="text"/>	TCP ▼	<input type="checkbox"/>

Add custom application

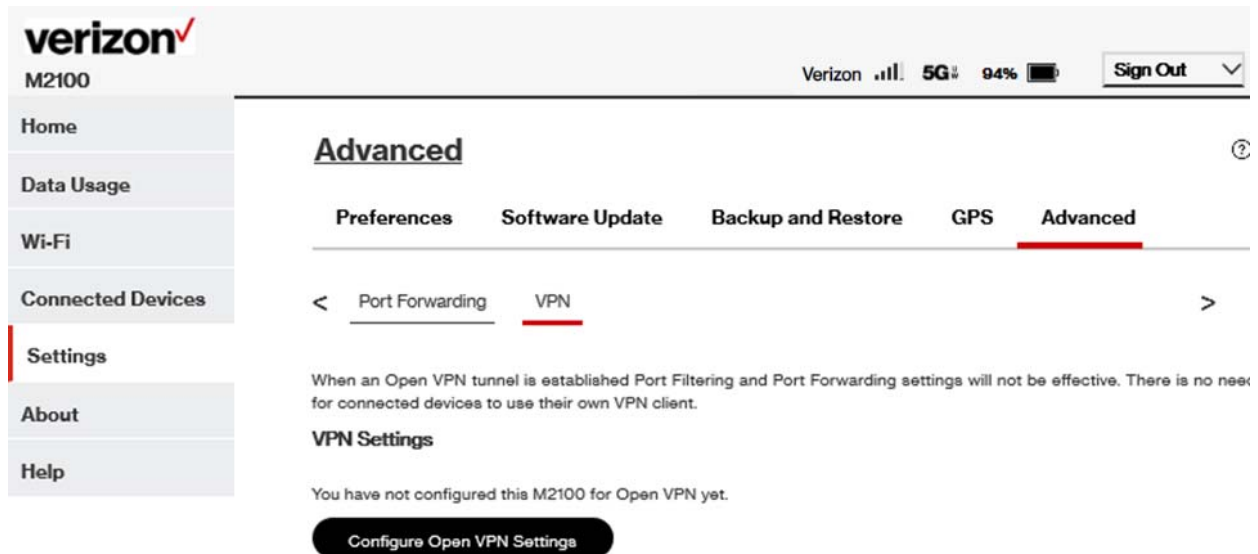

Save Changes

- **On:** Check this box if you want the application to be able to access the Internet (enabling port forwarding).
- **Application Name:** Enter a name for the custom application.
- **IP Address:** If you want to limit service for the application to a single connected device, enter the IP address of the target device. To find the IP address of a device, go to the Connected Devices page. **NOTE:** To ensure the device you are forwarding to does not have a different IP address after a reboot, either statically assign the IP address on the client device, or set up a DHCP reservation.
- **Port Type:** Select Range or Translate from the drop-down list.
- **Port Numbers:** Use the **From** and **To** fields to specify the range of port numbers to be forwarded. **NOTE:** If the application uses a single port instead of a range, type the same value in both the **From** and **To** fields.
- For translate ports, use the **Ext.** and **Int.** to specify ports. **NOTE:** Forwarding takes inbound traffic on a port to the same port on a client device. Use translate ports to send traffic to a different port on the client device. For example, instead of having inbound traffic on port 1234 forward to port 1234 of the client device, you can have it forward to port 5678.
- **Protocol:** Select the protocol used by the port range from the drop-down list (TCP, UDP, or both).
- **Delete:** Check this box to delete a custom application. **NOTE:** Click on the Port Forwarding tab again to remove deleted custom applications from view on the screen.

Click **Save Changes** to save any changes made to the custom applications.

Troubleshooting and Support

Overview

Common Problems and Solutions

Technical Support

Overview

The M2100 is a highly reliable product. Most problems are caused by one of these issues:

- System resources required by the M2100 are being used by other devices.
- Network coverage is unavailable due to coverage area, an account problem, or a network problem.

First Troubleshooting Steps

- Make sure you are using the M2100 in the correct geographic region.
- Ensure that your wireless coverage extends to your current location.
- Ensure you have an active data plan.

IMPORTANT: Before contacting support, be sure to restart both your connected device and your M2100, and ensure that your SIM card is inserted correctly.

Common Problems and Solutions

The solutions in this section can help solve many common problems encountered while using the M2100.

My M2100 powered off without pressing the Power button

This may occur under any of the following circumstances:

- Pressing the RESET button or Restore Factory Settings on the touchscreen or Admin Web UI
- M2100 automatically restarting after configuration changes
- Switching profiles
- Restoring the configuration settings
- Battery depletion

To restore power, follow these steps:

1. Manually press and hold the M2100 Power button for three seconds to turn it back on.
2. If the battery is depleted, charge the M2100 with the wall charger.

No service is available

- Reorient your device. If you are inside a building or near a structure that may be blocking the signal, change the position or location of the device. For example, try moving your device close to a window.
- You are outside your coverage area, or there may be a problem with your account. Check with your network operator.

My M2100 has no power/touchscreen doesn't display when I press the Power button

- Make sure the battery is properly seated in the device.
- Check that the battery is fully charged.

I forgot my Wi-Fi password

Tap **Wi-Fi Name/Password** to see your Wi-Fi name (SSID) and Wi-Fi password.

I forgot my M2100 Admin website password

- Your initial M2100 Admin website password is the same as your Wi-Fi password.
- If you have changed your Admin password, click **I forgot the Admin password** in the Sign In display. After you correctly answer the security question you set up, the current password is displayed.

I cannot connect a device to my M2100

On your M2100: Make sure the Network Signal Strength indicator  displays at least one bar and that the type of network is displayed on the Home screen (for example, **5G**).

On the device you want to connect: Make sure Wi-Fi is turned on. The M2100 will broadcast its own wireless network and name. Open the list of available Wi-Fi networks. Select the M2100 primary or guest network and enter the password.

NOTE: You can find the primary network name and password by tapping **Wi-Fi Name/Password** on your M2100 – swipe left to see the guest network name and password.

Once connected to the Internet, the M2100 Home screen displays the connected device.

I see the network name, but cannot connect a device to my M2100

Tap **Wi-Fi Name/Password** on the M2100 Home screen to make sure you are using the correct Wi-Fi password. Swipe left to view the guest network credentials if you are connecting to the guest network.

I want to see how many devices are connected

On the M2100 touchscreen: Look below the **Connected Devices** icon  on the Home screen for the number of connected devices. Tap the icon for details on the connected devices.

On the M2100 Admin website: The **Connected Devices** panel on the Home page lists the number of connected devices to the right of **Connected Devices**. Click > in the bottom-right corner of the panel for details on connected devices.

I want to see the firmware (software) version installed on my M2100

NOTE: Software updates are delivered to the M2100 automatically over the mobile network.

On the M2100 touchscreen: Tap **Menu** and then swipe up and tap **Software Update**.

On the M2100 Admin website: Click > in the bottom-right corner of the **Settings** panel and select the **Software Updates** tab.

I want to see the phone number for my M2100

On the M2100 touchscreen: Tap **Menu** and then swipe up and tap **About**. Your M2100 phone number is listed as **Wireless Number**.

On the M2100 Admin website: Click > in the bottom-right corner of the **About** panel and select the **Diagnostics** tab. Your M2100 phone number is listed as **Mobile number (MDN)**.

I want to see the battery level of my M2100

On the M2100 touchscreen: You can view the battery icon and percentage 100%  on the top right of the Home screen.

On the M2100 Admin website: You can view the battery icon and percentage on the top right of the Home page.

I want to turn my M2100 off

Press and hold the Power button on the M2100 for three seconds until you see the Power Off screen. Then select **Shutdown** and tap **OK**.

I want to know if my M2100 is still on when the touchscreen is dark

- When the M2100 is on, the LED status light on the back blinks slowly as a “sign of life”.

- You can press and release the Power button to wake up the touchscreen.

Technical Support

IMPORTANT: Before contacting Support, be sure to restart both your computer and your M2100, and ensure that your SIM card is inserted correctly.

Contact your service provider for assistance.

Proper Battery Use and Disposal

Product Specifications

Device

Name:	MiFi M2100 5G UW
Model:	M2100
Regulatory:	GCF FCC
Dimensions:	5.9" x 2.2" x 0.70" (150mm x 70mm x 17.9mm)
Weight:	7.40 oz (210 g)
Operating Temperature:	14° to 131°F (-10°C to 55°C)
Ports:	USB-C Port – (Charging, tethering, universal charging of external devices)
SIM:	Pre-installed 5G 4FF Nano SIM
Chipset:	Qualcomm® Snapdragon™ SDX55
Display:	2.4" (60.96mm) Touchscreen Power Indicator LED
Languages:	English Spanish

Environmental

Operating Temperature:	14° to 131°F (-10°C to 55°C)
Storage Temperature:	-30° C to 70° C (-22° F to 158° F)
Battery Charging Temperature:	0° C to 40° C (32° F to 104° F)
Relative Humidity:	The device shall be fully operational up to a maximum of 93% relative humidity (non-condensing).
Drop:	The device accessories (battery and charger) shall withstand drop from 1.5m onto hard surface (stone, concrete, metal) without mechanical, electrical, or functional damage, except for slight scratches or mars. The housing will withstand drop from 1.25m onto hard surface (stone, concrete, metal) without mechanical, electrical, or functional damage, except for slight scratches or mars.
Electrostatic Discharge:	The device shall be able to withstand the following ESD: 8kV contact / 15kV air discharge.
Vibration Stability:	The device shall be able to withstand the following vibration profile: 10-2000Hz, 1.5G acceleration, 3 axes.

Power

Charging:	14.4W Qualcomm Quick Charge™ 2.0 Charger USB Type A to C Cable
Time for Full Charge:	3 hours (when not in use)
Battery:	3500 mAh Li-Ion Battery (included) 8500 mAh Li-Ion (sold separately)
Battery Life:	Up to 24 hours

Network Connectivity†

5G mmWave and Sub6: n2, n5, n66, n260, n261
4G LTE CAT 22: B1, B2, B3, B4, B5, B7, B12, B13, B14, B17, B20, B28, B46, B48, B66
4x4 MIMO Sub6, 2x2 MIMO mmW
256 QAM Sub6, 64 QAM mmW
HSPA+/UMTS

Wi-Fi

Wi-Fi 6: 802.11 a/ac/b/g/n/ax (2.4GHz/5.0GHz)
2x2 MIMO
Supports up to 30 Wi-Fi Enabled Devices
Real Simultaneous Dual-Band Wi-Fi
Primary and Guest Wi-Fi Networks

Software

Systems Supported:	Windows® 10 Mac OS® X 10.13 or Higher Linux® Ubuntu 16.04 or Higher Chromebook™ and Microsoft® Surface
Security	AES 128 Encryption, 3rd Party Penetration Testing, Wi-Fi Security (WPA/WPA2/WPA3), Wi-Fi Protected Setup (WPS), Wi-Fi Privacy Separation, VPN Pass-Through, OpenVPN, MAC Address Filtering, NAT Firewall, Port Forwarding, Port Filtering, Security Hardened Web Interface, Password Hash, Anti-CSRF, Session Timeout, Wi-Fi On/Off Control, Incorrect Password Lockout, Admin Password to Lockout

Warranty and Services

Industry Leading Warranty
Inseego Care Support and Advanced Replacement Options Available
MiFi Provisioning Available to Apply Custom Templates and Verify Device Activation Prior to Shipment

† Data plan required. Coverage subject to network availability.

Regulatory Information

Federal Communications Commission Notice (FCC – United States)

FCC ID: PKRISGM2100

Electronic devices, including computers and wireless modems, generate RF energy incidental to their intended function and are therefore subject to FCC rules and regulations.

This equipment has been tested to, and found to be within the acceptable limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a residential environment.

This equipment generates radio frequency energy and is designed for use in accordance with the manufacturer's user manual. However, there is no guarantee that interference will not occur in any particular installation. If this equipment causes harmful interference to radio or television reception, which can be determined by turning the equipment off and on, you are encouraged to try to correct the interference by one or more of the following measures.

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/television technician for help.

This device complies with Part 15 of the Federal Communications Commission (FCC) Rules. Operation is subject to the following two conditions.

- This device may not cause harmful interference.
- This device must accept any interference received, including interference that may cause undesired operation.

WARNING: DO NOT ATTEMPT TO SERVICE THE WIRELESS COMMUNICATION DEVICE YOURSELF. SUCH ACTION MAY VOID THE WARRANTY. THIS DEVICE IS FACTORY TUNED. NO CUSTOMER CALIBRATION OR TUNING IS REQUIRED. CONTACT INSEEGO CORP TECHNICAL SUPPORT FOR INFORMATION ABOUT SERVICING YOUR WIRELESS COMMUNICATION DEVICE.

FCC CAUTION: Any changes or modification not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

MODIFICATIONS: The FCC requires that you be notified that any changes or modifications made to this device that are not expressly approved by Inseego Corp. may void your authority to operate the equipment.

NOTE: The Radio Frequency (RF) emitter installed in your modem must not be located or operated in conjunction with any other antenna or transmitter, unless specifically authorized by INSEEGO CORP.

FCC RF Exposure Guidance Statement

In order to comply with FCC RF Exposure requirements, this device must be installed to provide at least 10 mm separation from the human body at all times.

Product Certifications and Declarations of Conformity

Product Certifications and Declarations of Conformity documentation may be consulted at Inseego Corp., 9710 Scranton Road Suite 200, San Diego CA 92121, USA. <https://www.inseego.com/support/>

Wireless Communications

IMPORTANT: Due to the transmission and reception properties of wireless communications, data occasionally can be lost or delayed.

This can be due to the variation in radio signal strength that results from changes in the characteristics of the radio transmission path. Although data loss is rare, the environment where you operate the modem might adversely affect communications.

Variations in radio signal strength are referred to as fading. Fading is caused by several different factors including signal reflection, the ionosphere, and interference from other radio channels.

Inseego Corp. or its partners will not be held responsible for damages of any kind resulting from the delays or errors in data transmitted or received with the M2100 device, or failure of the M2100 device to transmit or receive such data.

Limited Warranty and Liability

Inseego Corp. warrants for the 12-month period immediately following receipt of the Product by Purchaser that the Product will be free from defects in material and workmanship under normal use. THESE WARRANTIES ARE EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

The exclusive remedy for a claim under this warranty shall be limited to the repair or replacement, at Inseego's option, of defective or non-conforming materials, parts or components. The foregoing warranties do not extend to (I) non-conformities, defects or errors in the Products due to accident, abuse, misuse or negligent use of the Products or use in other than a normal and customary manner, environmental conditions not conforming to Inseego's specification, of failure to follow prescribed installation, operating and maintenance procedures, (II) defects, errors or nonconformities in the Product due to modifications, alterations, additions or changes not made in accordance with Inseego's specifications or authorized by Inseego, (III) normal wear and tear, (IV) damage caused by force of nature or act of any third person, (V) shipping damage, (VI) service or repair of Product by the purchaser without prior written consent from Inseego, (VII) products designated by Inseego as beta site test samples, experimental, developmental, reproduction, sample, incomplete or out of specification Products, or (VIII) returned products if the original identification marks have been removed or altered.

Safety Hazards

Do not operate the 5g MiFi M2100 in an environment that might be susceptible to radio interference resulting in danger, specifically:

Areas where prohibited by the law

Follow any special rules and regulations and obey all signs and notices. Always turn off the host device when instructed to do so, or when you suspect that it might cause interference or danger.

Where explosive atmospheres might be present

Do not operate your device in any area where a potentially explosive atmosphere might exist. Sparks in such areas could cause an explosion or fire resulting in bodily injury or even death. Be aware and comply with all signs and instructions.

Users are advised not to operate the device while at a refueling point or service station. Users are reminded to observe restrictions on the use of radio equipment in fuel depots (fuel storage and distribution areas), chemical plants or where blasting operations are in progress.

Areas with a potentially explosive atmosphere are often but not always clearly marked. Potential locations can include gas stations, below deck on boats, chemical transfer or storage facilities, vehicles using liquefied petroleum gas (such as propane or butane), areas where the air contains chemicals or particles, such as grain, dust or metal powders, and any other area where you would normally be advised to turn off your vehicle engine.

Near medical and life support equipment

Do not operate your device in any area where medical equipment, life support equipment, or near any equipment that might be susceptible to any form of radio interference. In such areas, the host communications device must be turned off. The device can transmit signals that could interfere with this equipment.

On an aircraft, either on the ground or airborne

In addition to FAA requirements, many airline regulations state that you must suspend wireless operations before boarding an airplane. Please ensure that the modem is turned off prior to boarding aircraft in order to comply with these regulations. The modem can transmit signals that could interfere with various onboard systems and controls.

While operating a vehicle

The driver or operator of any vehicle should not operate a wireless data device while in control of a vehicle. Doing so will detract from the driver or operator's control and operation of that vehicle. In some countries, operating such communications devices while in control of a vehicle is an offense.

Electrostatic Discharge (ESD)

Electrical and electronic devices are sensitive to electrostatic discharge (ESD). Macintosh native connection software might attempt to reinitialize the device should a substantial electrostatic

discharge reset the device. If the software is not operational after an ESD occurrence, then restart your computer.

Proper Battery Use and Disposal

IMPORTANT: In the event of a battery leak:

- Do not allow the liquid to come in contact with the skin or the eyes. If contact has been made, wash the affected area with large amounts of water and seek medical advice.
 - Seek medical advice immediately if a battery has been swallowed.
 - Communicate the appropriate steps to be taken if a hazard occurs. Due to the transmission and reception properties of wireless communications, data occasionally can be lost or delayed.
-

Please review the following guidelines for safe and responsible battery use:

- Do not disassemble or open, crush, bend or deform, puncture, or shred.
- Do not modify or remanufacture, attempt to insert a foreign object into the battery, immerse or expose to water or other liquids, or expose to fire, explosion, or other hazard.
- Only use the battery for the system for which it was specified.
- Only use the battery with a charging system that has been qualified with the system per IEEE 1725. Use of an unqualified battery or charger may present a risk of fire, explosion, leakage, or other hazard.
- Do not short circuit a battery or allow a metallic or conductive object to contact the battery terminals.
- Replace the battery only with another battery that has been qualified with the system per IEEE 1725. Use of an unqualified battery may present a risk of fire, explosion, leakage, or other hazard.
- Promptly dispose of used batteries in accordance with local regulations.
- Battery usage by children should be supervised.
- Avoid dropping the M2100 or battery. If the M2100 or the battery is dropped, especially on a hard surface, and the user suspects damage, take it to a service center for inspection.
- Improper battery use may result in a fire, explosion, or other hazard.

7

Glossary

Glossary

- **4GLTE**—Fourth Generation Long Term Evolution. LTE is a standard for wireless data communications technology and an evolution of the GSM/UMTS standards. The goal of LTE is to increase the capacity and speed of wireless data networks using new DSP (digital signal processing) techniques and modulations that were developed around the turn of the millennium. A further goal is the redesign and simplification of the network architecture to an IP-based system with significantly reduced transfer latency compared to the 3G architecture. The LTE wireless interface is incompatible with 2G and 3G networks, so that it must be operated on a separate wireless spectrum
- **5G**—Fifth Generation. The successor to 4GLTE technology, offering greater bandwidth and higher download speeds. In addition to serving cellular networks, 5G networks can be used as internet service providers, competing with other ISPs. 5G also opens up new IoT and M2M possibilities. Wireless devices must be 5G enabled to use 5G networks.
- **802.11 (a, b, g, n, ax)**— A set of WLAN Wi-Fi communication standards in the 2.4 and 5 GHz frequency bands.
- **APN** — Access Point Name. The name of a gateway between a mobile network and another computer network, often the Internet.
- **bps** — Bits per second. The rate of data flow.
- **Broadband** — High-capacity high-speed transmission channel with a wider bandwidth than conventional modem lines. Broadband channels can carry video, voice, and data simultaneously.
- **DHCP** — Dynamic Host Configuration Protocol. Software found in servers and routers that automatically assigns IP addresses and other configuration data to computers, tablets, printers, and other devices connection to the IP network.
- **DHCP Server** — A server or service with a server that assigns IP addresses.
- **DMZ** — demilitarized zone. A sub-network that contains and exposes an organization's external-facing services to an untrusted network, usually a larger network such as the Internet.
- **DNS** — Domain Name System. A system for converting host names and domain names into IP addresses on the Internet or on local networks that use the TCP/IP protocol.
- **Firmware** — A computer program embedded in an electronic device. Firmware usually contains operating code for the device.
- **FTP** — File Transfer Protocol. A standard network protocol used to transfer computer files between a client and server.
- **GB**— Gigabyte. A multiple of the unit byte for digital information storage. Usage depends on context. When referring to disk capacities it usually means 10⁹ bytes. It also applies to data transmission quantities over telecommunication circuits.

- **Gbps** — Gigabits per second. The rate of data flow.
- **Hotspot** — A Wi-Fi (802.11) access point or the area covered by an access point. Used for connecting to the Internet.
- **HTTP** — Hypertext Transfer Protocol. An application-level protocol for accessing the World Wide Web over the Internet.
- **IEEE** — Institute of Electrical and Electronics Engineers. An international technical/professional society that promotes standardization in technical disciplines.
- **IMAP** — Internet Message Access Protocol. An Internet standard protocol for accessing email from a remote server from email clients. IMAP allows access from multiple client devices.
- **IMEI** — International Mobile Equipment Identity. Used in LTE networks to identify the device. It is usually printed on the device and can often be retrieved using a USSD code.
- **IP** — Internet Protocol. The mechanism by which packets are routed between computers on a network.
- **IP type** — The type of service provided over a network.
- **IP address** — Internet Protocol address. The address of a device attached to an IP network (TCP/IP network).
- **ISP** — Internet Service Provider. Also referred to as the service carrier, an ISP provides Internet connection service (See Network Operator).
- **Kbps** — Kilobits per second. The rate of data flow.
- **LAN** — Local Area Network. A type of network that lets a group of computers, all in close proximity (such as inside an office building), communicate with one another. It does not use common carrier circuits though it can have gateways or bridges to other public or private networks.
- **MAC Address** — Media Access Control. A number that uniquely identifies each network hardware device. MAC addresses are 12-digit hexadecimal numbers. This is also known as the physical or hardware address.
- **Mbps** — Megabits per second. The rate of data flow.
- **MNO** — Mobile Network Operator. The vendor that provides your wireless access. Known by different names in different regions, some examples are: wireless provider, network provider, or cellular carrier.
- **MSID** — Mobile Station IDentifier. A number for a mobile phone that identifies that phone to the network.
- **Network Operator** — The vendor that provides your wireless access. Known by different names in different regions, some examples are: wireless provider, network provider, or cellular carrier.
- **Network Technology** — The technology on which a particular network provider's system is built; such as LTE or GSM.

- **NMEA port** — National Marine Electronics Association port. The port through which applications can access a GPS data stream.
- **NNTP** — Network News Transfer Protocol. The primary protocol used to connect to Usenet servers and transfer news articles between systems over the Internet.
- **POP3** — Post Office Protocol 3. A protocol in which email is received and held for you by your Internet server until you download it.
- **Port** — A virtual data connection used by programs to exchange data. It is the endpoint in a logical connection. The port is specified by the port number.
- **PortForwarding** — A process that allows remote devices to connect to a specific computer within a private LAN.
- **Port Number** — A 16-bit number used by the TCP and UDP protocols to direct traffic on a TCP/IP host. Certain port numbers are standard for common applications.
- **PRL** — Preferred Roaming List. A list that your wireless phone or device uses to determine which networks to connect with when you are roaming (Network operator specific).
- **Protocol** — A standard that enables connection, communication, and data transfer between computing endpoints.
- **Proxy** — A firewall mechanism that replaces the IP address of a host on the internal (protected) network with its own IP address for all traffic passing through it.
- **Router** — A device that directs traffic from one network to another.
- **RSSI** — Received Signal Strength Indicator. An estimated measure of how well a device can hear a signal from an access point or router. RSSI value is pulled from the device's Wi-Fi card (hence "received" signal strength), so it is not the same as transmit power from an access point or router.
- **SIM** — Subscriber Identification Module. Found in LTE and GSM network technology, the SIM is a card containing identification information for the subscriber and their account. The SIM card can be moved to different devices.
- **SMTP** — Simple Mail Transfer Protocol. The standard protocol for sending emails across the Internet.
- **SNMP** — Simple Network Management Protocol. An Internet protocol used to manage and monitor network devices and their functions.
- **SSID** — Service Set Identifier. The name assigned to a Wi-Fi network.
- **TCP/IP** — Transmission Control Protocol/Internet Protocol. The set of communications protocols used for the Internet and other similar networks.

- **TFTP**—Trivial File Transfer Protocol. An Internet software utility for transferring files that is simpler to use than FTP, but does not provide user authentication and directory visibility supported by FTP.
- **Telnet** — A user command and underlying TCP/IP protocol that allows a user on one computer to log into another computer that is part of the same network.
- **TTY**—Text Telephones (TTY), also known as Telecommunications Device for the Deaf (TDD), are used by the deaf, hard-of-hearing, and individuals with speech impairments to communicate.
- **UDP**— User Datagram Protocol (UDP) is a communications protocol that offers a limited amount of service when messages are exchanged between computers in a network that uses the Internet Protocol (IP). UDP is an alternative to the Transmission Control Protocol (TCP) and, together with IP, is sometimes referred to as UDP/IP.
- **USB**— Universal Serial Bus. A connection type for computing device peripherals such as a printer, mobile modem, etc.
- **USB Port Types**—USB ports on computers and hubs have a rectangular Type A port, and peripheral devices have a cable with a Type A connector. Peripheral devices that do not have an attached cable typically have a Type C port on the device and a separate Type A to C cable. Type B connectors have been replaced by Type C. Mini-USB connectors have largely been superseded by Micro-USB, but are still used with some cameras, music players, etc. Micro-USB connectors are used with portable devices, such as phones and battery packs, although USB-C is being adopted by most manufacturers.
- **USSD**— Unstructured Supplementary Service Data (USSD), also known as “Quick code” or “Feature code”, is a communications protocol used to send data between a mobile device and network service provider.
- **VPN**—Virtual Private Network. A secure private network that runs over the public Internet. Commonly used to connect to an office network from elsewhere.
- **Wi-Fi**—Any system that uses the 802.11 standard developed and released in 1997 by the IEEE.
- **Wi-Fi 5**—The fifth generation of Wireless Fidelity, using 802.11ac on 5 GHz. This standard was developed and released in 2013.
- **Wi-Fi 6**—The sixth generation of Wireless Fidelity, using 802.11ax on licensed exempt bands between 1 and 6 GHz. This standard was developed in 2020.
- **Wi-Fi Client**— A wireless device that connects to the Internet via Wi-Fi
- **WPA/WPA2**— Wi-Fi Protected Access. A security protocol for wireless 802.11 networks from the Wi-Fi Alliance.
- **WPA3**—The next generation of Wi-Fi Protected Access. WPA3 simplifies security, provides more robust authentication, increased cryptographic strength, and offers additional capabilities for personal and enterprise networks. WPA3 retains interoperability with WPA2 devices.
